## Radiation Warning

The component of the equipment described within this Document is part of a system for the intended generation of X-rays for medical diagnosis.

**X-rays generate a potential risk for both patients and operators.**

For this reason the application of X-rays for a given medical purpose must aim at the minimization of radiation exposition to any persons.

Those persons responsible for the application must have the specific knowledge according to legal requirements and regulations and must establish safe exposure procedures for this kind of systems.

Those persons responsible for the planning and installation of this equipment must observe the national regulations.

## Mechanical - Electrical Warning

All of the **movable assemblies and parts of this equipment** should be operated with care and routinely inspected in accordance with the manufacturer's recommendations contained in the equipment Accompanying Documents.

Maintenance and service is only to be performed by personnel authorized by **PROVOTEC GmbH & Co. KG**.

**Live electrical terminals are deadly.**

**Do not remove flexible high tension cables from X-ray tube housing or high tension generator and/or access covers from X-ray generator.**

For all components of the equipment protective earthing means must be provided in compliance with the national regulations.

**Failure to comply with the foregoing may result in serious or fatal bodily injuries to the operator or those in the area.**

## To the User

The user of this Document is directed to read and carefully review the instructions, warnings and cautions contained herein prior to beginning operation, installation or service activities. While you may have previously operated equipment similar to that described in this Document, changes in design, manufacture or procedure may have occurred which significantly affect the present operation.

The installation and service of equipment described herein is to be performed by authorized, qualified **PROVOTEC** personnel. Assemblers and other personnel not employed by nor directly affiliated with **PROVOTEC** technical services are directed to contact the local **PROVOTEC** office before attempting installation or service procedures.

## Improvement Recommendations

Users of this Document are encouraged to report errors, omissions and improvement recommendations to the following address:

# Chapter 1

## 1 Equipment Description

### 1.1 Introduction

The Bucky is intended for installation and movement of an x-ray grid, for insertion of a cassette tray (alternatively with size sensing) and installation of a measuring chamber for x-rays and for operation of an X-ray generator with Automatic Exposure Control (AEC).

X-ray grid, cassette tray and measuring chamber with adaptation parts have separate order numbers.

The x-ray grid is being used for reduction of scatter radiation which causes a decrease of image quality. The oscillating movement of the x-ray grid avoids the visibility of grid lines on the film.

This Technical Description comprises two versions of the Bucky with different supply voltages; for 115 / 230 V AC (selectable) and 24 V AC

#### ATTENTION:

**The bucky may be installed only in equipment designed according to EN 60601-1 or UL 2601-1 and operated within its specifications.**

#### 1.1.1 X-ray grid

X-ray grids with the following specifications can be used.

Dimensions:

Length in direction of movement	(479.5 +/- 1) mm
Width	(438 +/- 1) mm
Thickness	up to 5 mm
Max. weight:	2.4 kg

#### 1.1.2 Cassette tray

Without size sensing:	Model No. 05010000
Without size sensing with fail safe:	Model No. 05010003

With size sensing:	Model No. 05030000
--------------------	--------------------

#### 1.1.3 Measuring chambers

Length in direction of movement	max. 550 mm
Width	max. 470 mm
Thickness	=< 11 mm
Max. weight:	2.4 kg

Mounting and dimensions of usable measuring chambers have to be checked individually. Their design and corresponding adaptation parts determine the compatibility

## 1.2 Specifications

- The design of the Bucky is in compliance with class I, type B equipment of EN 60601-1, UL 2601-1 and CAN/CSA C22.2 No. 601.1-M90. The Bucky is suitable only for short time operation (refer to maximum exposure repetition rate).
- **Standards:**  
EN 60601-1  
UL 2601-1 and CAN/CSA C22.2 No. 601.1-M90
- **Product life:**  
10 years
- **Maintenance**  
No maintenance required

- Electrical interface**

Via a plug or a terminal strip (version according to customer requirement)

- Line voltage** (Bucky models equipped with transformer T1):

115 V /230 VAC +/- 10%, 50 / 60 Hz (transformer inside the bucky)

Transient current: approx. 1 A

Nominal current: 0.35 / 0,16 A

Fuse: 0.5 / 0,25 A slow-blow

24 V AC +/- 10%, 50 / 60 Hz

Transient current: approx.. 3 A

Nominal current: 1.5A

Fuse: 2.0 A slow-blow (external fusing)

- Grid start signal**

24VAC, 50/60Hz

24VDC

115/230V, 50/60 Hz (Version according to customer requirement)

- Transport and stock environment:**

Temperature range: - 15 °C to + 70 °C

Relative humidity range: 10 % to 95 % (none condensing)

Atmospheric pressure range: 500 hPa to 1060 hPa

- Operating environment:**

Temperature range: + 10 °C to + 40 °C

Relative humidity range: 30 % to 75 %

Atmospheric pressure range: 700 hPa to 1060 hPa

- Exposure release contacts of the Bucky start relay:**

Voltage: max. 24 V DC

Current: max. 500 mA

- Exposure time**

with grid 40 lines, 12:1 approx. 2,0 ms till 20 sec.

- Maximum exposure repetition rate:**

Duty cycle 20%

6 exposures per minute

- Exposure start position:**

8 mm from home position

(corresponds to 120 ms at a x-ray grid travel speed of 15 cm per second)

- X-ray grid travel speed:**

Factory adjusted to 15 cm per second +/- 10 % (maximum 18.8 cm per second adjustable)

- X-ray grid travel range:**

+/- 10,5 mm around the center

- Outside dimensions**

Table top length direction 572 mm

Table top cross direction 584 mm

Height 68,5 mm

- Operation**

Horizontal grid movement only

- Mounting**

Horizontal to vertical

For mounting holes refer to dwg. 0502 7213 (interface control dwg.)

	<b>Product</b>	<b>included packing and Documentation</b>
Bucky LRE and cassette tray KL	13,00 kg	14,24 kg
Bucky LRE and cassette tray KL-FSE	13,40 kg	14,54 kg
Bucky LREFA and cassette tray KLFA	14,72 kg	16,24 kg
Cassette tray KL	4,14 kg	5,00 kg
Cassette tray KLFA	5,08 kg	5,94 kg

- **Weight**

This unit is not determined for use in areas of explosion hazards

- **EC Conformity**

This unit is in conformance with the basic requirements of the MDD 93/42 ECC for medical products according article 11 and Annex VII.

The declaration of conformity is available upon request at:

**PROVOTEC GmbH & Co. KG**

Brandenburger Ring 2-4

32339 Espelkamp

**Tel: (+49) 5772 / 978 900**

**Fax: (+49) 5772 / 978 910**

**e-mail: info@provotec.de**

### 1.3 Disposal

For disposal the national and regional regulations have to be considered.

The bucky consists mainly of mechanical and electrical parts and some plastic pieces.

In case of doubt contact Provotec GmbH & Co. KG

## Chapter 2

### 2 Installation

#### Attention

**Equipment installation may be performed only by Provotec GmbH & Co. KG service personnel or agents expressly authorized by us.**

**The bucky may be installed only in equipment designed according to EN 60601-1.**

**If the bucky should be installed in equipment, which does not meet the above mentioned regulations the system responsible has the duty to check that no risk exists.**

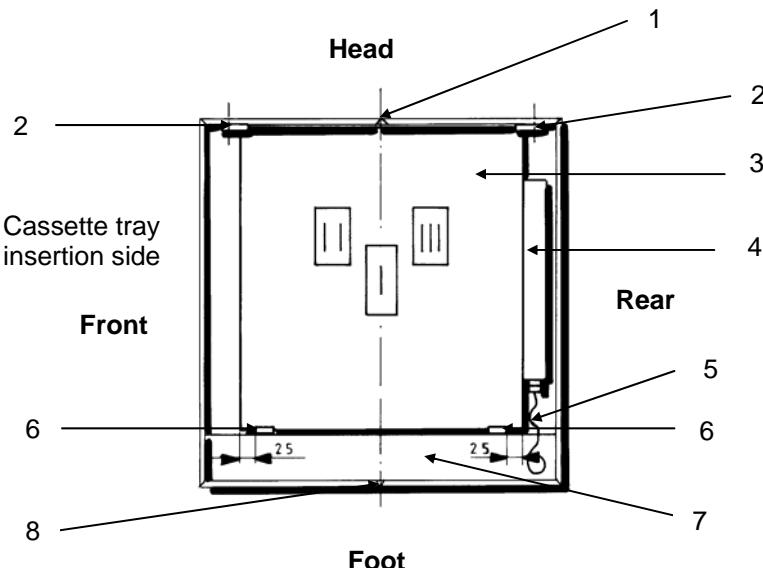

**The bucky has to be operated within its specifications in each case.**

**The installation work must never be performed with line voltage connected or applied .**

#### 2.1 Mechanical installation

##### 2.1.1 Installation of the measuring chamber within the bucky

- Unscrew cover plate (Figure 2-1, item 7)

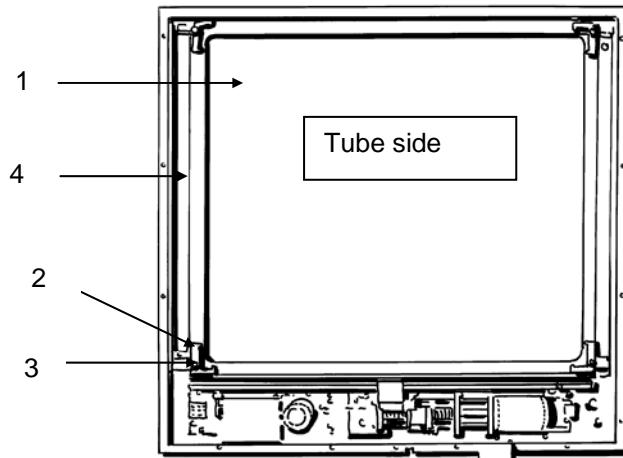

**Fig. 2-1 Bucky with Measuring chamber**

- Insert the measuring chamber (Figure 2-1, item 3) into the bucky with the preamplifier to the rear and the left measuring field (II) and the right field (III) to the head direction (Figure 2-1, item 4)
- Place positioning blocks (Figure 2-1, item 6) according to version of the chamber (Figure 2-1, item 3) approx. 25 mm apart from the border of the measuring chamber (refer to Fig 2-1) and insert chamber with blocks into the bucky.
- Position fasteners (figure 2-1, item 2) at the measuring chamber and tighten them at the corresponding holes of the bucky frame.
- Take care that the center of the chamber is in line with the center of the bucky. The front to rear center is marked by a notch (Figure 2-1, item 1) and a slotted hole (Figure 2-1, item 8). the head to foot end center should be fixed automatically by the positioning blocks.
- Connect the chamber interface cable (Figure 2-1, item 5) at the preamplifier of the chamber (Figure 2-1, item 4)

### 2.1.2 Installation of the x-ray grid within the bucky.

- Place the x-ray grid (Figure 2-2, item 1) with marking for the x-ray tube (e.g. x-ray tube symbol) directed to the x-ray tube.
- Fix the grid with four clamping springs (Figure 2-2, item 2) and four nuts (Figure 2-2, item 3) at the movable grid frame of the bucky (Figure 2-2, item 4).

**Fig. 2-2 Bucky with grid**

### 2.1.3 Installation of Bucky within a table or a wall stand

At all sides of the Bucky there are tapped holes for mounting (refer to Interface control dwg. 05027213).

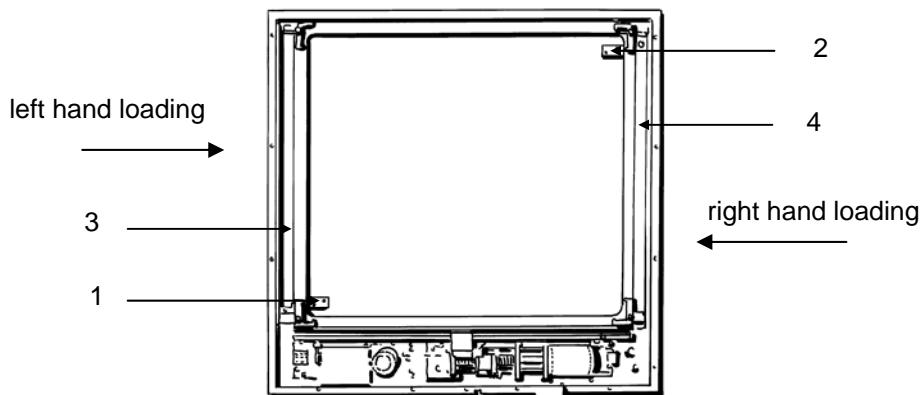

### 2.1.4 Wall stand Bucky conversion from left-hand to right-hand loading

#### NOTE

Due to installations requirements it might be necessary to convert the Bucky from left-hand loading (standard) to right-hand loading

#### 2.1.4.1 Cassette tray without size sensing

##### 1. Wall stand

**Fig. 2-3 Bucky**

- Remove the cassette tray. From the bottom side of the Bucky unscrew the end stop (Figure 2-3, item 1) which prevents the cassette tray from being completely pulled out and the spring (Figure 2-3, item 3) which grounds the cassette tray and screw both parts again into the diagonal located holes (Figure 2-3, item 2 for the end stop and Figure 2-3, item 4 for the spring).

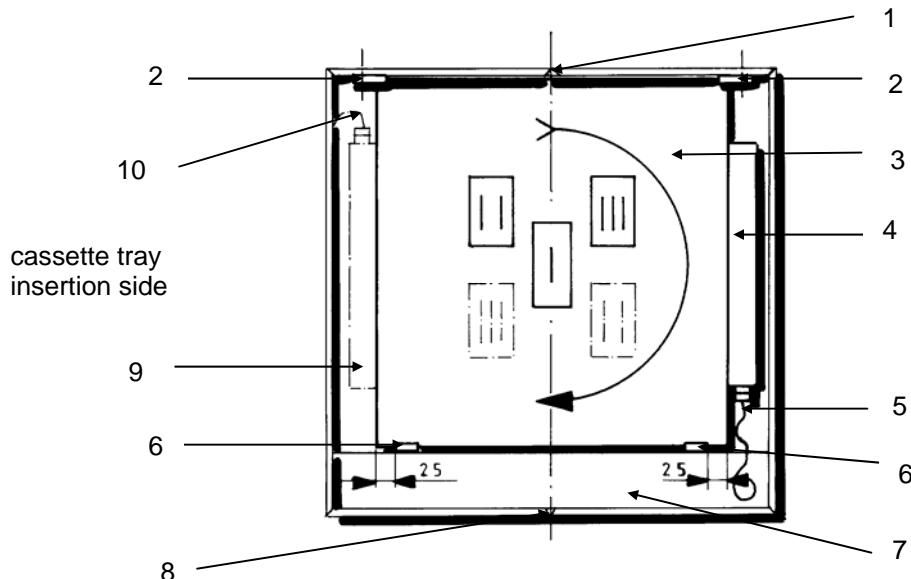

**Attention: The hole to fasten the spring has to be cleaned from paint to ensure proper contact of the screw to the bucky housing.**

Insert the cassette tray from the right side now.

## 2. Table

At standard installation the wall stand is located at the head end side of the bucky table.

If the wall stand is located at the foot end side of the bucky table due to installation requirements it is necessary to rotate the measuring chamber inside the table bucky. The patient head and foot end side are exchanged now.

**Fig. 2-4 Bucky with measuring chamber**

- Unscrew cover plate (Figure 2-4, item 7).
- Remove the grid (Figure 2-2, item 1) by loosening the four nuts (Figure 2-2, item 3) and four clamping springs (Figure 2-2, item 2) from the frame (Figure 2-2, item 4).
- Disconnect the chamber interface cable (Figure 2-4, item 5) from the pre-amplifier of the measuring chamber (Figure 2-4, item 4).
- Remove the fasteners (Figure 2-4, item 2) from the measuring chamber.
- Pull out the measuring chamber (Figure 2-4, item 3) with positioning blocks (Figure 2-4, item 6) of the U-shaped rail of the Bucky.
- Turn the measuring chamber by 180 degrees (see Figure 2-4). The pre-amplifier of the measuring chamber (Figure 2-4, item 9) has to face the side for cassette tray insertion (see Figure 2-4).

### ATTENTION

**Ensure that the marked fields of the measuring chamber are upside after turning.**

- Place the positioning blocks (Figure 2-4, item 6) at the measuring chamber (Figure 2-4, item 3) (approx. 25 mm apart from the border of the measuring chamber, see Figure 2-4) and insert them together with the measuring chamber into the U-shaped rail of the Bucky.
- Position the fasteners (Figure 2-4, item 2) at the measuring chamber and tighten them at the corresponding holes of the Bucky.
- Take care that the front to rear center of the measuring chamber and the front to rear center of the Bucky are in line. This center of the Bucky is marked by a notch (Figure 2-4, item 1) and a slotted hole (Figure 2-8, item 8).
- Connect the chamber interface cable (Figure 2-4, item 10) at the pre-amplifier of the measuring chamber (Figure 2-4, item 9).

## 3. Collimator

Corresponding to the measuring fields, the light centering pattern in front of the collimator has to be turned by 180 degrees.

### 2.1.4.2 Cassette tray with size sensing

#### 1. Wall stand

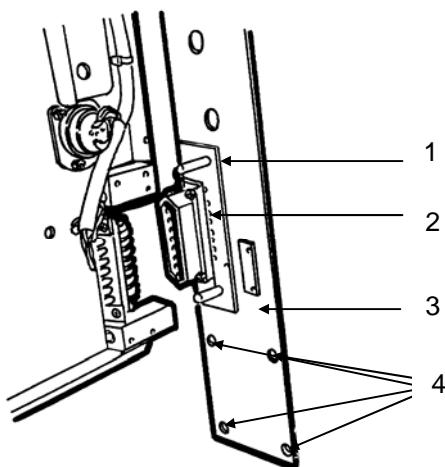

- Remove the cassette tray. From the bottom side of the Bucky unscrew the end stop (Figure 2-3, item 1) which prevents the cassette tray from being completely pulled out and the spring (Figure 2-3, item 3) which grounds the cassette tray and screw both parts again into the diagonal located holes (Figure 2-3, item 2 for the end stop and Figure 2-3, item 4 for the spring).

**Attention:**

**The hole to fasten the spring has to be cleaned from paint to ensure proper contact of the screw to the bucky housing.**

- Unscrew the screws to fix the plate (Figure 2-5, item 3) and remove the plate from the Bucky.
- Unscrew the screws to fix the U-shaped bracket (Figure 2-5, item 1) from rear side of the plate and remove the U-shaped bracket with connector (Figure 2-5, item 2) from the plate (Figure 2-5, item 3) and mount it again at the opposite rear side of the plate.

**Attention: The screws for the U-shaped bracket are fixed with Omnifit. Use this anerobic adhesive Omnifit 80 or 100 to fix the screws for the U-shaped bracket also.**

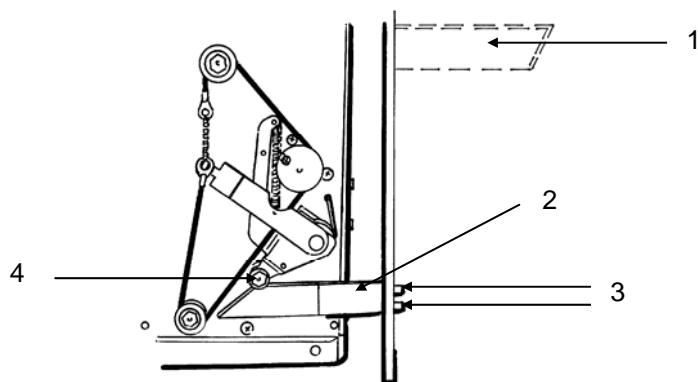

**Fig. 2-5 Plate with U-shaped bracket and connector**

- Unscrew the screws (Figure 2-6, item 3), remove the striker (Figure 2-6, item 2) from the plate (Figure 2-5, item 3) and mount it again at the opposite rear side into the middle slot of the plate (see Figure 2-6, item 1).

**ATTENTION**

**Do not unsolder the cables/wires. The length is sufficient.**

- Route the existing cable at the inner side at the upper Bucky frame through the motor drive part to the opposite side.

**Fig. 2-6 Plate with striker**

- Previously fix the plate (Figure 2-5, item 3) without turning at the opposite side of the Bucky.
- Insert the cassette tray and watch the mating connector. If both connectors mate smoothly tighten the screws for the plate.
- Check that striker and internal bearing of the cassette tray are in line.
- Check that at inserted cassette tray the internal lever (Figure 2-6, item 4) for the finger to sense the cassette size can still be moved by approx. 2 mm. The internal lever can be seen through the hole from the front side at inserted cassette tray.

## 2. Table

- Conversion of the Bucky has to be performed as explained in chapter 2.1.4.1 "2. Table".

## 3. Collimator

Corresponding to the measuring fields, the light centering pattern inside the collimator has to be turned by 180 degrees.

## 2.2 Electrical installation

### 2.2.1 Interconnection of the interface cable

Connect the interface cable according to interface drawing or information supplied separately by the system responsible. The bucky LRE (without sensing) can be interfaced via a 9-pole plug directly on the motor drive PCB or via an outside terminal strip mainly supplied for OEM versions or to achieve compatibility with older systems.

ID 0502 1900 for 115/230 VAC versions with 115/230 VAC start circuit.

ID 0502 2000 for 24 VAC versions or for 115/230 VAC versions with 24 V start circuit.

The terminal strip adaptation (plug, cable and terminal strip) can be ordered separately.

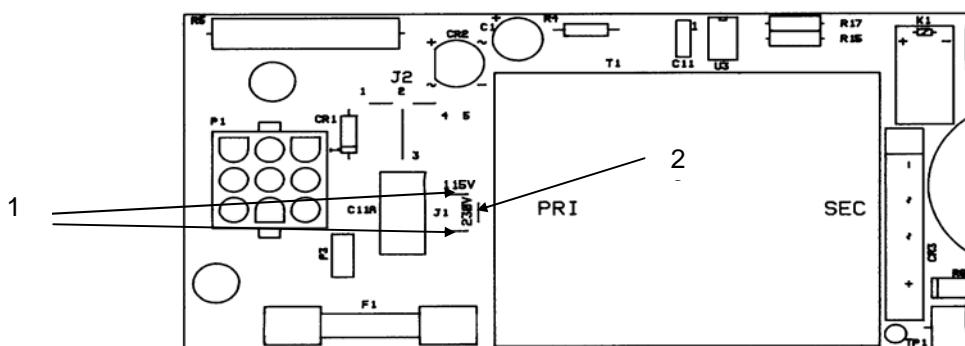

The bucky LREFA (sensing version) has for the interface an outside terminal strip always.

### 2.2.2 Setting the line voltage at the transformer T1

#### ATTENTION

For 115/230 VAC versions the Bucky has been set in the factory to line voltage according to the label beside the nameplate. If the Bucky has to be operated with a different line voltage than shown on the label besides the nameplate change the line voltage jumpers according to (Figure 2-7). For 115 V line voltage insert jumpers according to Fig. 2-7/1. For 230 V line voltage insert jumper according to Fig. 2-7/2.

Change Fuse F1 to 0.5 A slow-blow for 115 V or 0.25 A slow-blow for 230 V.

**Fig. 2-7 Line voltage setting**

### 2.2.3 Functional test

Three LEDs are located on the PCB which are visible through a slot in the foot end panel of the Bucky. The green LED CR9 in the center lights up when supply voltage for the motor is present.

The red LED CR8 at the left lights up when Bucky start is commanded.

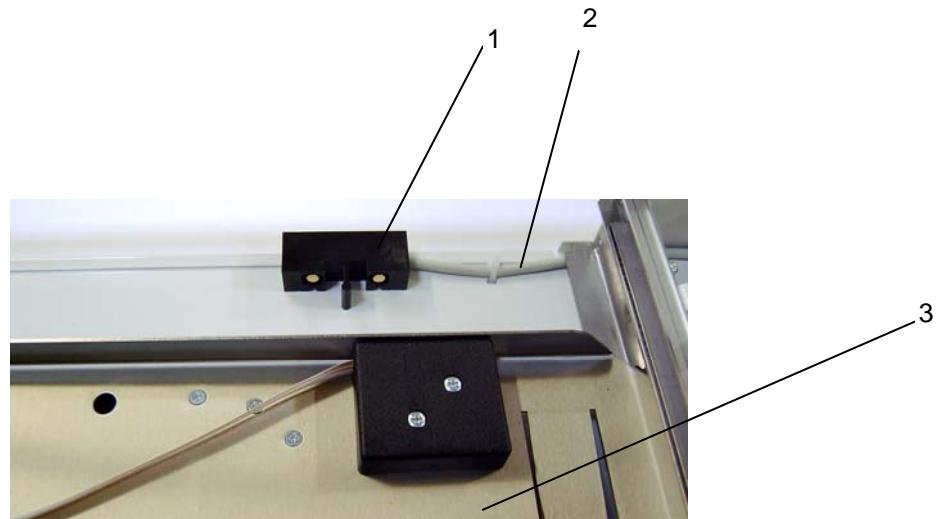

The red LED CR10 at the right lights up when the exposure release relay is energized and the exposure release contacts are closed.

## 2.3 Bucky with Fail-Safe

### Manual Cassette tray with Fail-Safe

The Bucky Fail-Safe contact block (Figure 2-8, item 1) detects the Fail-Safe signal of the manual cassette tray with Fail-Safe unit (Figure 2-8, item 3).

Via cable (Figure 2-8, item 2) the Fail-Safe signal is routed to Bucky electronic PCB (Figure 2-9, item 1) and controls the Bucky Contact release.

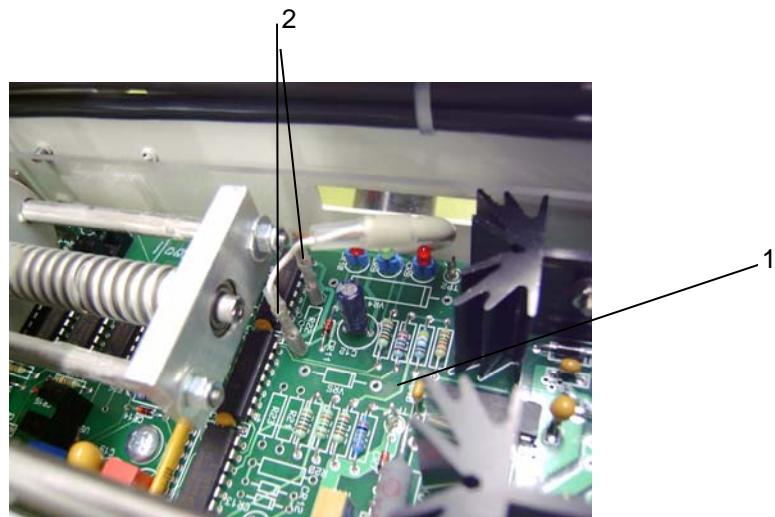

**Figure 2-8 Bucky Fail-Safe contact block**

### Connection of Fail-Safe signal

#### Bucky with Manual Cassette tray with Fail-Safe unit:

The Fail-Safe signal comes from the Bucky Fail-Safe contact block (Figure 2-8, item 1) and is connected to the Bucky control PCB (Figure 2-9, item 1). Depending of the PCB version connections are made to the pads of position R22 or C.P.S. J5/1 and J5/2 (Figure 2-9, item 2)

**Fig. 2-9 Connection of Fail-Safe signal**

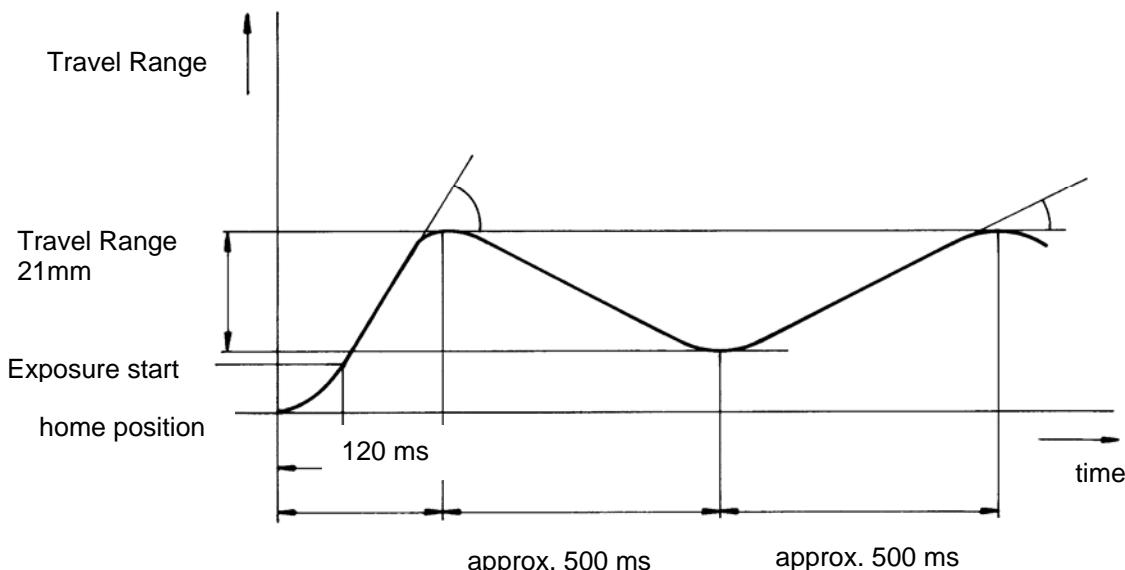

## Chapter 3

### 3 Functional Description

#### 3.1 General description

The x-ray grid is being driven by a DC motor which is in line with an elastic clutch and a spindle with a feed screw which is elastically linked to the frame for the x-ray grid. The principle of movement is shown in the diagram travel range vs. time (see Figure 3-1).

The frame with x-ray grid starts from home position and travels with high speed to the first reversal. On that distance the exposure start signal is commanded. The majority of exposures is terminated prior to reaching the first reversal. The frame with x-ray grid continues with an oscillating movement at reduced speed.

**Fig. 3-1 Travel range vs. time diagram**

#### 3.2 Circuit description

The circuit description is based on Circuit Diagram 05027402 or 05027203 for 115 / 230 V ~ versions (with transformer T1) and on Circuit Diagram 05027404 at Buckys for 24 V ~ versions (without transformer T1).

The line voltages of 115 / 230 V ~ resp. 24 V ~ are rectified by the bridge CR4 and smoothed by capacitor C5.

At Buckys with transformer the no-load voltage at test point TP1 is 38 V DC and at Buckys (24VAC) without transformer is 36 DC.

Voltage regulator U3 and power transistor Q1 stabilize this DC voltage to approximately 24 V (TP3). Its level can be adjusted with potentiometer R15. This factory setting affects the grid travel speed and should not be changed in the field. Resistor R10 is the current limiter for voltage regulator U3.

The motor is driven via the Transistors Q5 to Q8 (for frame movement).

The motor drives a spindle and a lead screw transfers the motion to the frame for the x-ray grid.

The light barriers U9, U11 and U14 are actuated synchronously to the grid movement. Actuating light barriers U9 and U14 reverse the direction of the grid movement. U15 is actuated if the x-ray grid is in

its home position. When the x-ray grid moves approx. 8 mm away from its home position light barrier U11 becomes actuated and exposure release relay K1 becomes energized and the exposure release contacts are closed.

Actuating the trigger switch at the X-ray generator provides a Bucky start signal at the plug J1 directly or via terminal strip TB1 depending on version. By the start signal U1 becomes conductive so that the signal at pin 5 turns low. This low signal is supplied to inputs 6 and 8 of gate U7. The outputs 10 and 4 of gate U7 becomes high, which are fed to inputs 4 and 5 of the RS flip-flop U8.

If light barrier U9 is not actuated, the signal at its output is low. U6 (13, 12) inverts this low signal which causes input 3 of U8 (RS flip-flop) to go high as well. Input 2 of U8 is at high level because the signal at the output of light barrier U14 is high. U7 (12, 13) inverts that high signal so that output 11 of U7 becomes low and the signal at output 13 of U8 is high. Thus, the signals at the inputs 2, 3, 4 and 5 of U8 are high. Output 1 of U8 is low and output 3 of U10 high. The signals at the input 8 and 9 of U10 are high and output 10 of U10 is low.

Outputs 2, 4 and 6 of U12 have high signal levels and the transistor Q8 becomes conductive through R38. The transistor Q5 becomes conductive by U4 (14), Q4 and U13 (9, 11, 14, 10, 12, 15) via resistor R35, and the x-ray grid starts moving out of the home position.

When the light barrier U9 is actuated, the signal at the output of U9 becomes high and it makes input of U8 low via U6 (13, 12). The signal at output 1 of U8 turns high and the motor stops.

The RS flip-flop U8 is triggered. After a delay of 80 µsec the motor is reactivated, but rotates in the opposite direction.

In standby the signal at output 16 of U4 is low. This reduces the reference voltage for voltage regulator U3 through the voltage divider formed by R9 and R13. With Bucky start signal on output 16 of U4 turns high. Via R9, and R11 charges capacitor C9 which provides a smooth motor start.

Simultaneously with the Bucky start signal capacitor C18 discharges through R26 and R27 until the low signal at input 2 of U7 allow the gate to reset. Output 3 of U7 turns high and output 16 of U4 turns low. The signal at the set point input 5 of voltage regulator U1 returns to low level and the motor rotates again with low speed. This change occurs prior to the first reversal of the motor.

Exposure release relay K1 with contacts K1A and K1B is energizes via the RS flip-flop U5 under the following conditions: If the temperature of Q 1 is normal the PTC PT2 has low resistance and the input 1 of U6 is high and output 2 of U6 low. Output 4 of U6 is high and the inputs 2 and 3 of U5 are high also.

With the Bucky start signal input 5 of U5 turns high. When the light barrier U11 is actuated the output signal at U11 goes high. Via U6 (11,10 and U5B) input 4 of U5A becomes high. The signal at output 1 of U5 goes low. Now relay K1 is energized through U4 (7, 10) and U4 (6, 11) and if existing via the cassette present switch.

### 3.3 Bucky with Fail-Safe present switch

#### Bucky with manual cassette tray

The Bucky contact releases an X-ray exposure only when the cassette present switch is closed and the Cassette Tray with Fail-Safe function is fully inserted into the Bucky.

## Chapter 4

### 4 Replacement of Components

#### SERVICE NOTES

- The Bucky is maintenance-free. The spindle must not be lubricated, because the feed screw is made of self-lubricating plastic. Vestiges of a lubricant are caused by a single treatment during assembling for optimum running in.
- If the Bucky is contaminated by spilled liquids (e.g. contrast medium), the service should be called.
- In case of a breakdown of the Bucky the release of exposures is not generally disabled. If x-ray grid lines are visible on the film, the service should be called.

#### ATTENTION

The replacement of components may be performed only by PROVOTEC service personnel or agents expressly authorized by us. Replacement work must never be performed with the line voltage connected or applied.

#### 4.1 Replacing the drive mechanism or PCB

- Remove the two inner Phillips screws and loosen the three Phillips screws at the frame of the Bucky. Now take off the cover of the PCB towards the inside..
- Unscrew the hex nut from the bolt that connects the shaft nut to the grid frame bracket.
- Move the frame with x-ray grid to the front until the bolt becomes free.
- Lift the x-ray grid frame off the foot end guide rail and remove it from the head end guide.
- Disconnect the plug P1 from the PCB and (if connected) the Fail-Safe signal (Fig. 2-9 item 2)
- Remove the 8 screws that fixes the PCB including the drive mechanism
- Now the PCB including the drive mechanism can be removed while slightly rotating it (lift the right frame section first).
- The motor drive mechanism can be removed by take out the two screws from the bottom side of the PCB.

#### ATTENTION

During remounting the motor drive mechanism with the 2 screws at the bottom side it is necessary to line-up the drive mechanism such that the two light barrier actuators run centrally between the two light barriers on the PCB. Check for correct alignment by turning the clutch by hand.

- Reinstall the PCB with drive mechanism in reverse order.

## Chapter 5

### 5 Description of Graphic Symbols, Labels, and Abbreviations

#### 5.1 Graphic symbols

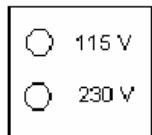

Symbol	Title
	Attention, consult accompanying documents
	Classification according EN 60601-1, Type B
	Alternating current
	Protective earth (ground)
	CE-marking
	UL-marking

#### 5.2 Labels

Model Number 0502 0000-0010 and Model number 0502 0015-0021

Nameplate

Setted Line Voltage

### 5.3 Abbreviations

DC	Direct Current
mA	milliampere
V	volt
Hz	hertz
... A T fuse ...	ampere slow-blow
ms	milliseconds
kg	kilogramme
mm	millimetre
cm/s	centimetre per second
°C	degree Celsius
%	percent
hPa	hecto pascal
CE	Communautés Européennes

## Chapter 6

### 6 List of Contact Functions and Potentiometers

Marking	Schematic Diagram Coordinates	Function
<b>K1</b>		Exposure release relay
Coil	0502 7402,3,4 B7	Energized by Bucky start, the light barrier U11 is actuated and temperature of Q1 is normal.
<b>Contact</b>		
A	0502 7402,3,4 AB8	Connects plug J1-1 and J1-2 resp. terminals TB1-1 and TB1-2 at terminal adapter. Contacts are in parallel to contact B
B	0502 7402,3,4 AB8	Connects plug J1-1 and J1-2 resp. terminals TB1-1 and TB1-2 at terminal adapter. Contacts are in parallel to contact A
<b>Pots</b>		
R27	0502 7402,3,4 B2	Adjustment of the period of high speed x-ray grid travel. The period is factory adjusted.
R15	0502 7402,3,4 B5	Adjustment of x-ray grid travel speed. The travel speed is factory adjusted.

## 6.1 External interface signal description.

### 6.1.1 115/230 VAC Version and 115/230 VAC start circuit (Dwg. 05027403)

Plug J1 Pin	Terminal TB	Function
1	1-1	Exposure release relay contacts A&B N.O.
2	1-2	Exposure release relay contacts A&B Arm
3		not used
4		not used
5		not used
6	1-3	Bucky start 115/230 V if jumper JP1 2-3 is inserted
7	1-4	115/230 VAC supply neutral
8		0 VDC of internal circuit for OEM purposes
9	1-8	115/230 V supply
GND Stud	1-6	PE

### 6.1.2 115/230 VAC supply voltage and 24 V start circuit (Dwg. 05027402)

Plug J1 Pin	Terminal strip TB1	Function
1	1-1	Exposure release relay contacts A&B N.O.
2	1-2	Exposure release relay contacts A&B Arm
3		not used
4	1-4	Bucky start signal 0 V
5		not used
6	1-5	24 V AC or DC supply for 0V bucky start signal
7	1-7	115/230 VAC supply neutral
8		0VDC of internal circuit for OEM purposes
9	1-8	115/230 VAC supply
GND Stud	1-6	PE

### 6.1.3 24 VAC Version and 24 V start circuit (Dwg. 05027404)

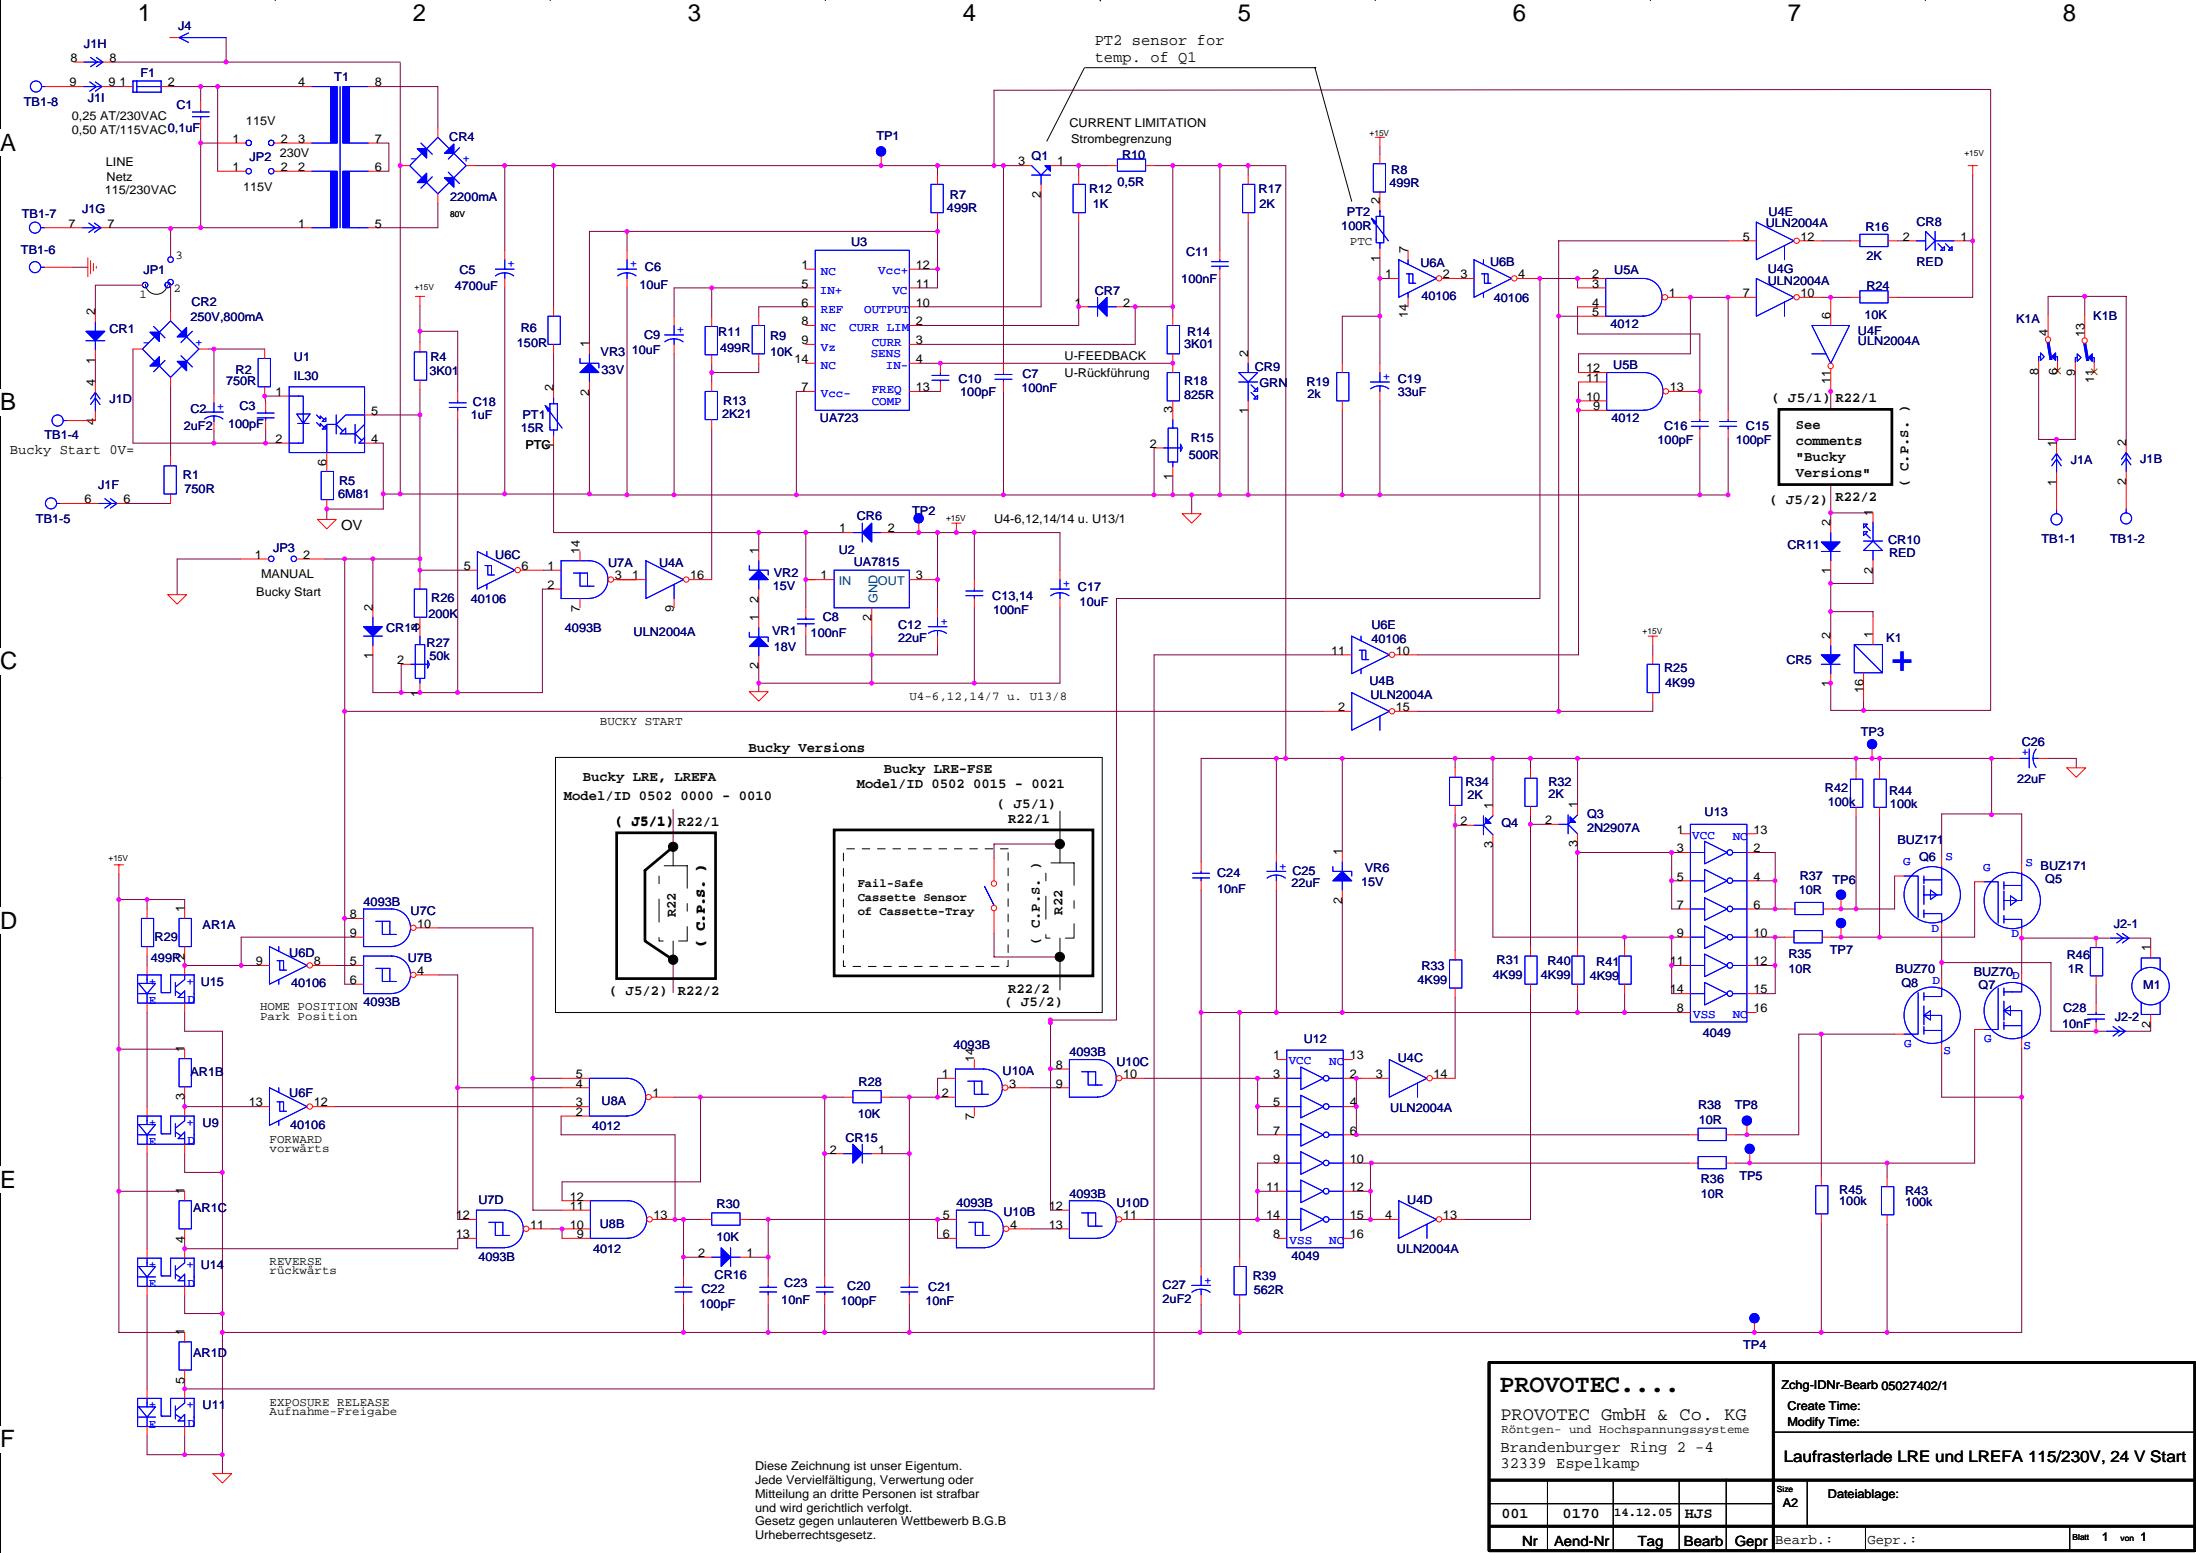

Plug J1 Pin	Terminal strip TB1	Function
1	1-1	Exposure release relay contacts A&B N.O.
2	1-2	Exposure release relay contacts A&B Arm
3		not used
4	1-4	Bucky start 0 VDC if jumper JP1 1-2 is inserted not used for 0 VAC start
5		not used
6	1-5	24 VDC supply for 0VDC bucky start. 0VAC bucky start if jumper JP1 2-3 is inserted.
7	1-7	24 VAC supply
8		0 VDC of internal circuit for OEM purposes
9	1-8	0 VAC supply
GND Stud	1-6	PE

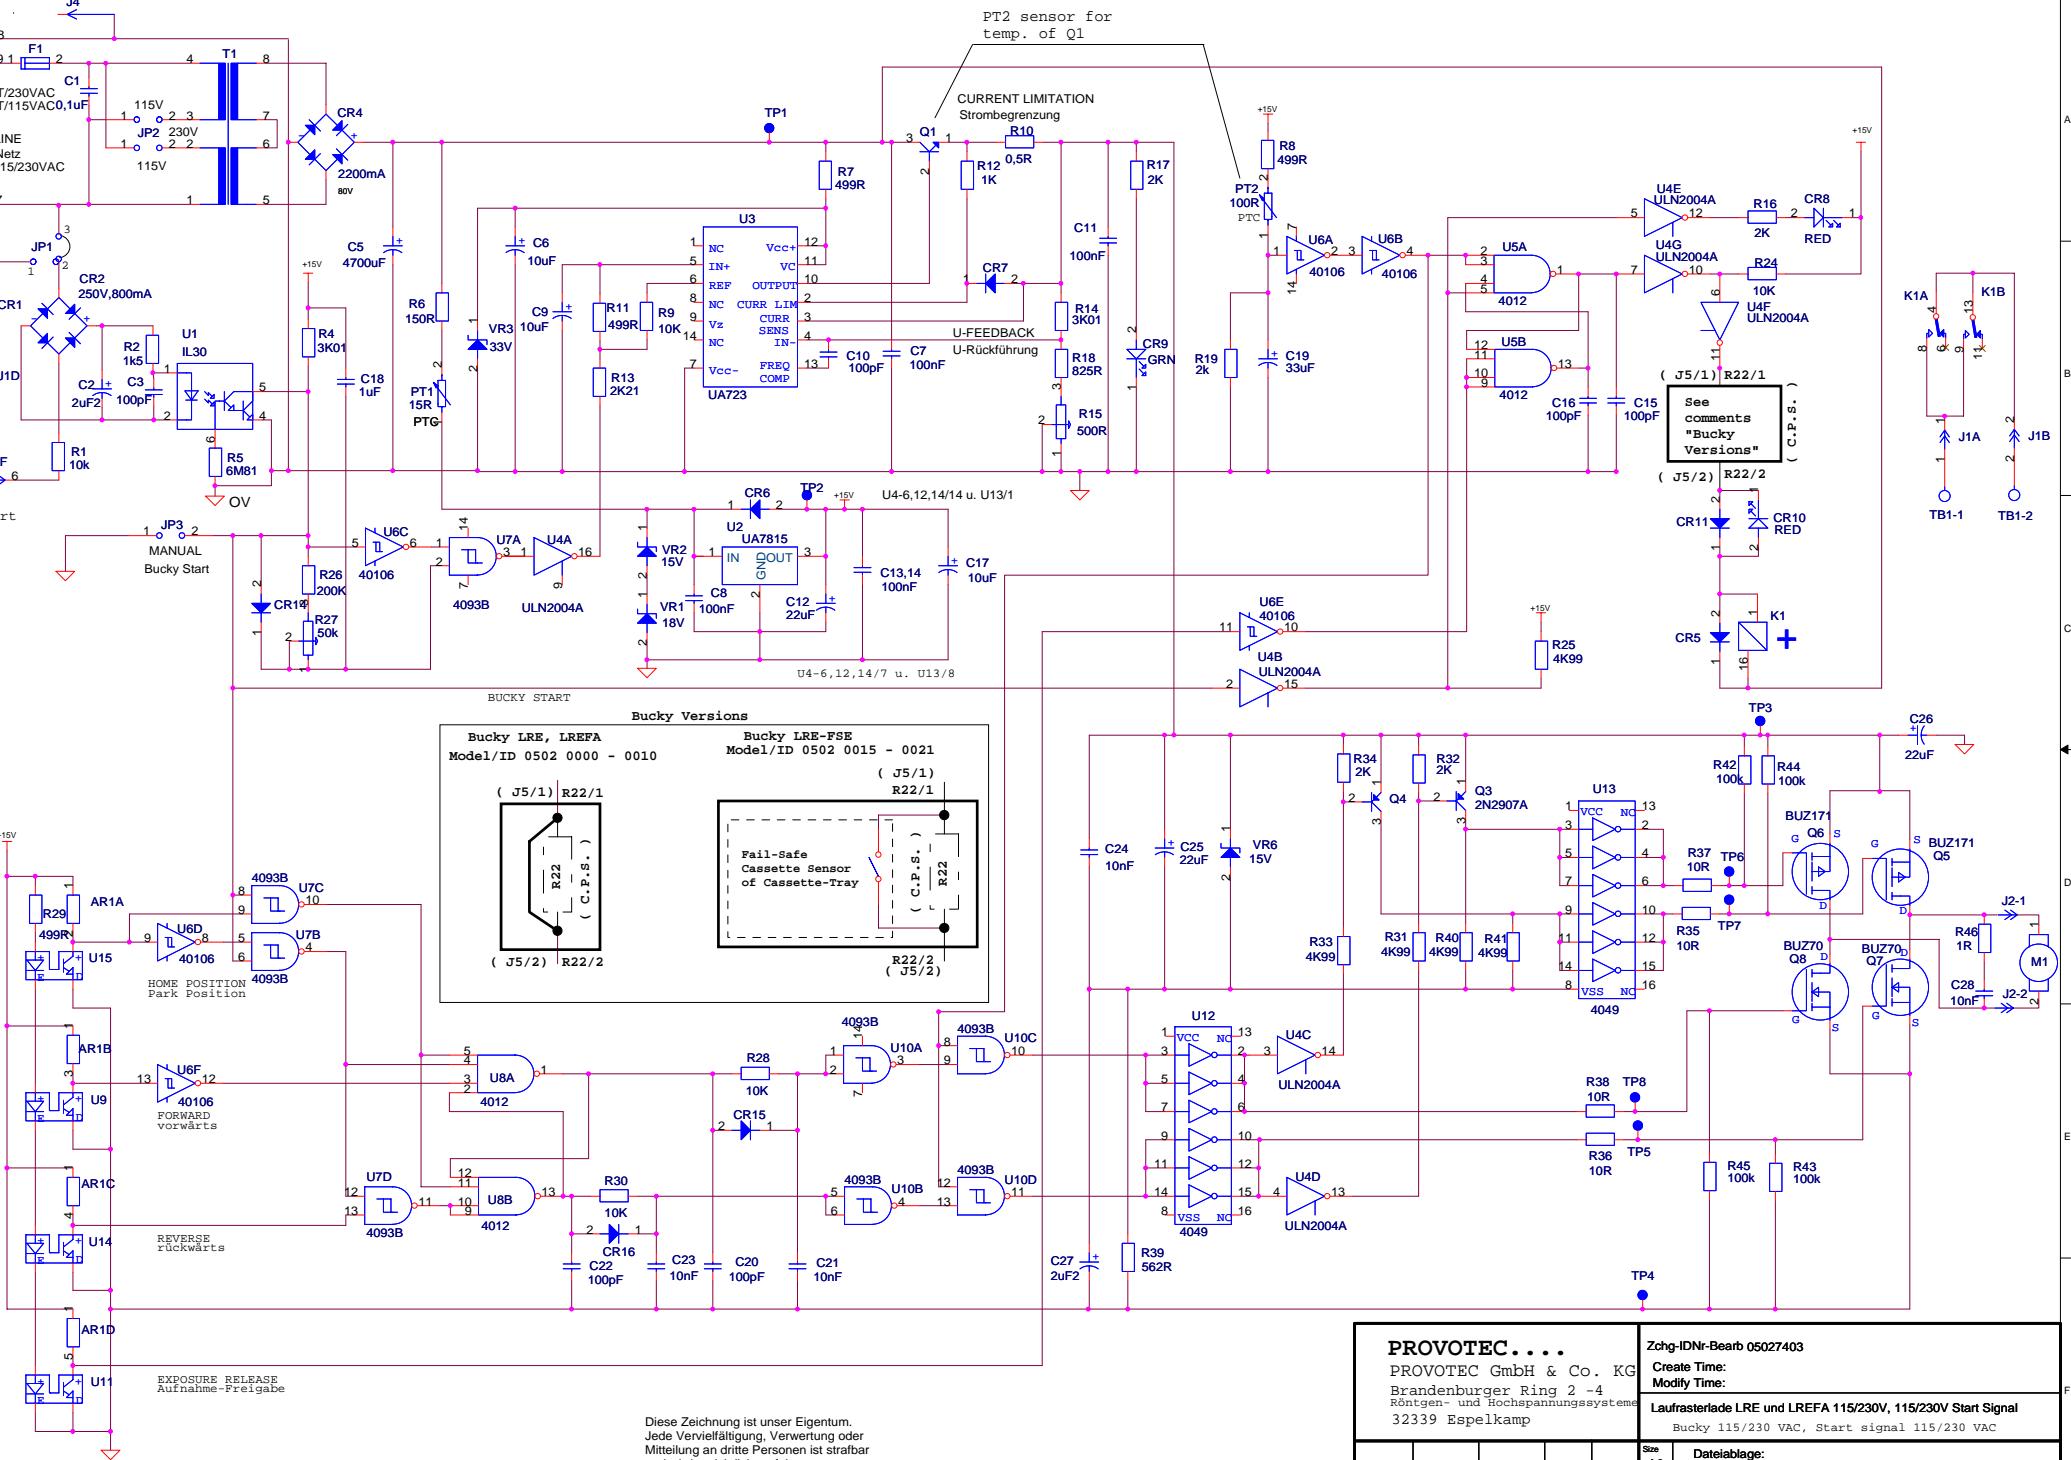

### 6.1.4 Option for sensing (Dwg. 05037400)

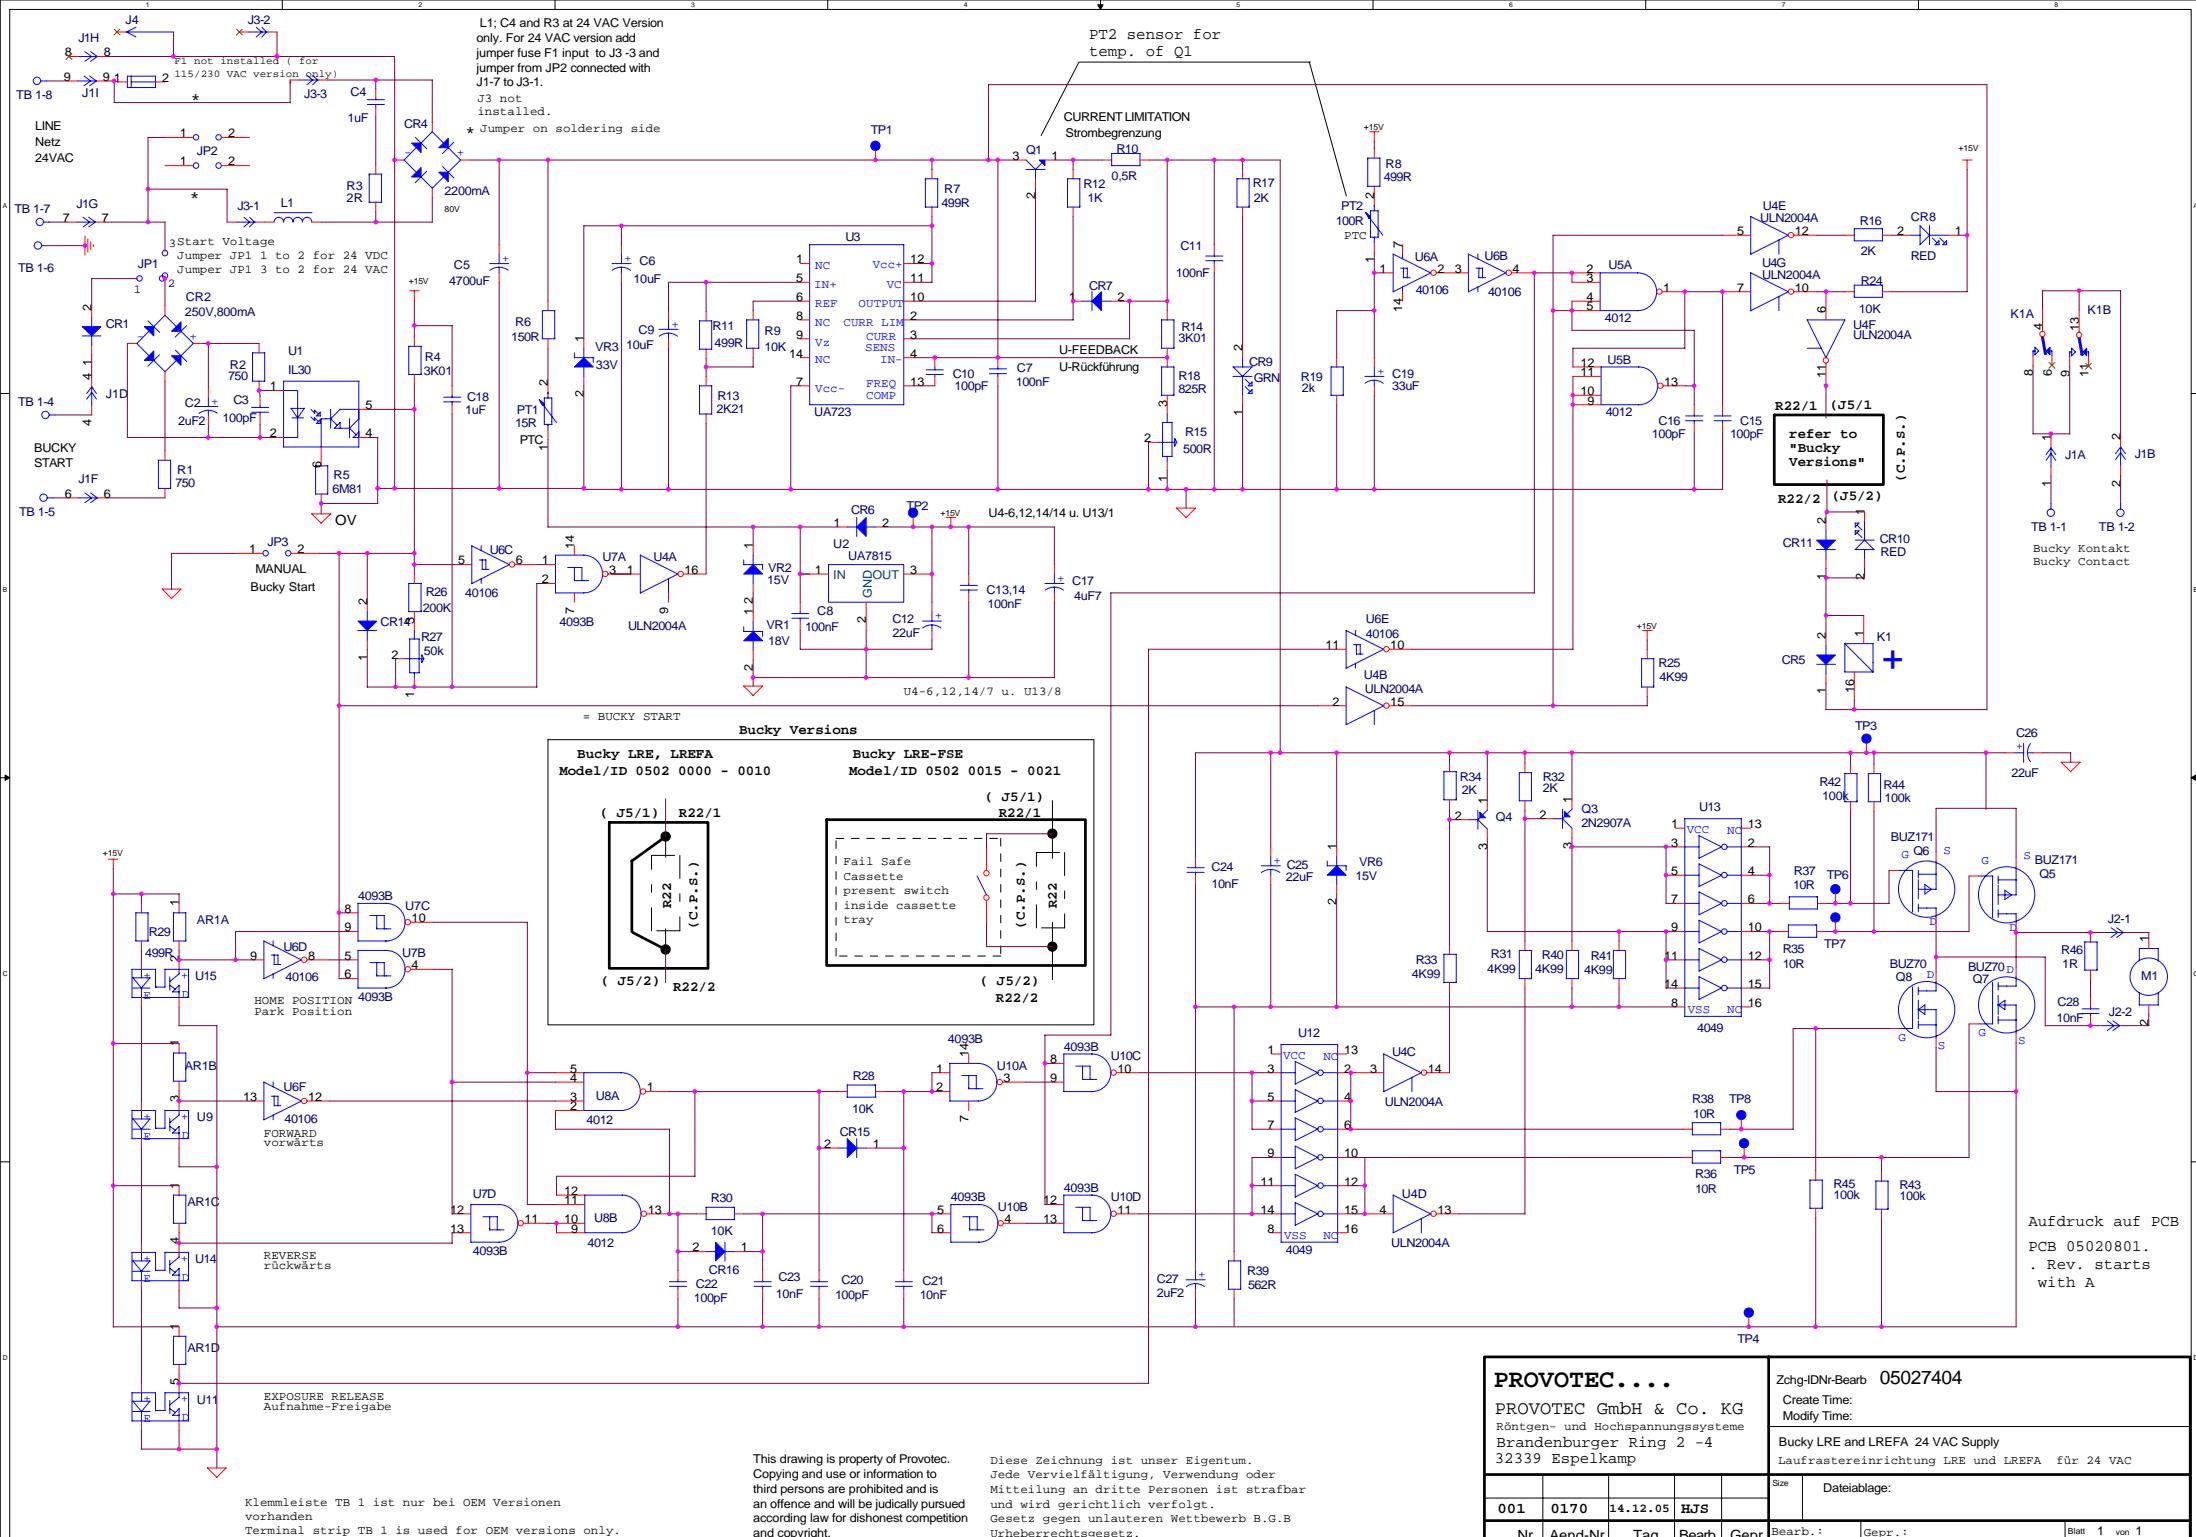

Plug J3 Pin	Terminal strip TB 1	Function
1 + 8	1-9	Cassette present Sw. N.C.
2 + 9	1-10	Cassette present Sw. Arm
3 + 10	1-11	Cassette sense sign. transverse
4 + 11	1-12	Supply of sensing pots.
5 + 12	1-13	Cassette sense sign. longitudinal
6 + 13	1-14	Supply of sensing pots.
7 + 14		PE, internally connected to GND Stud

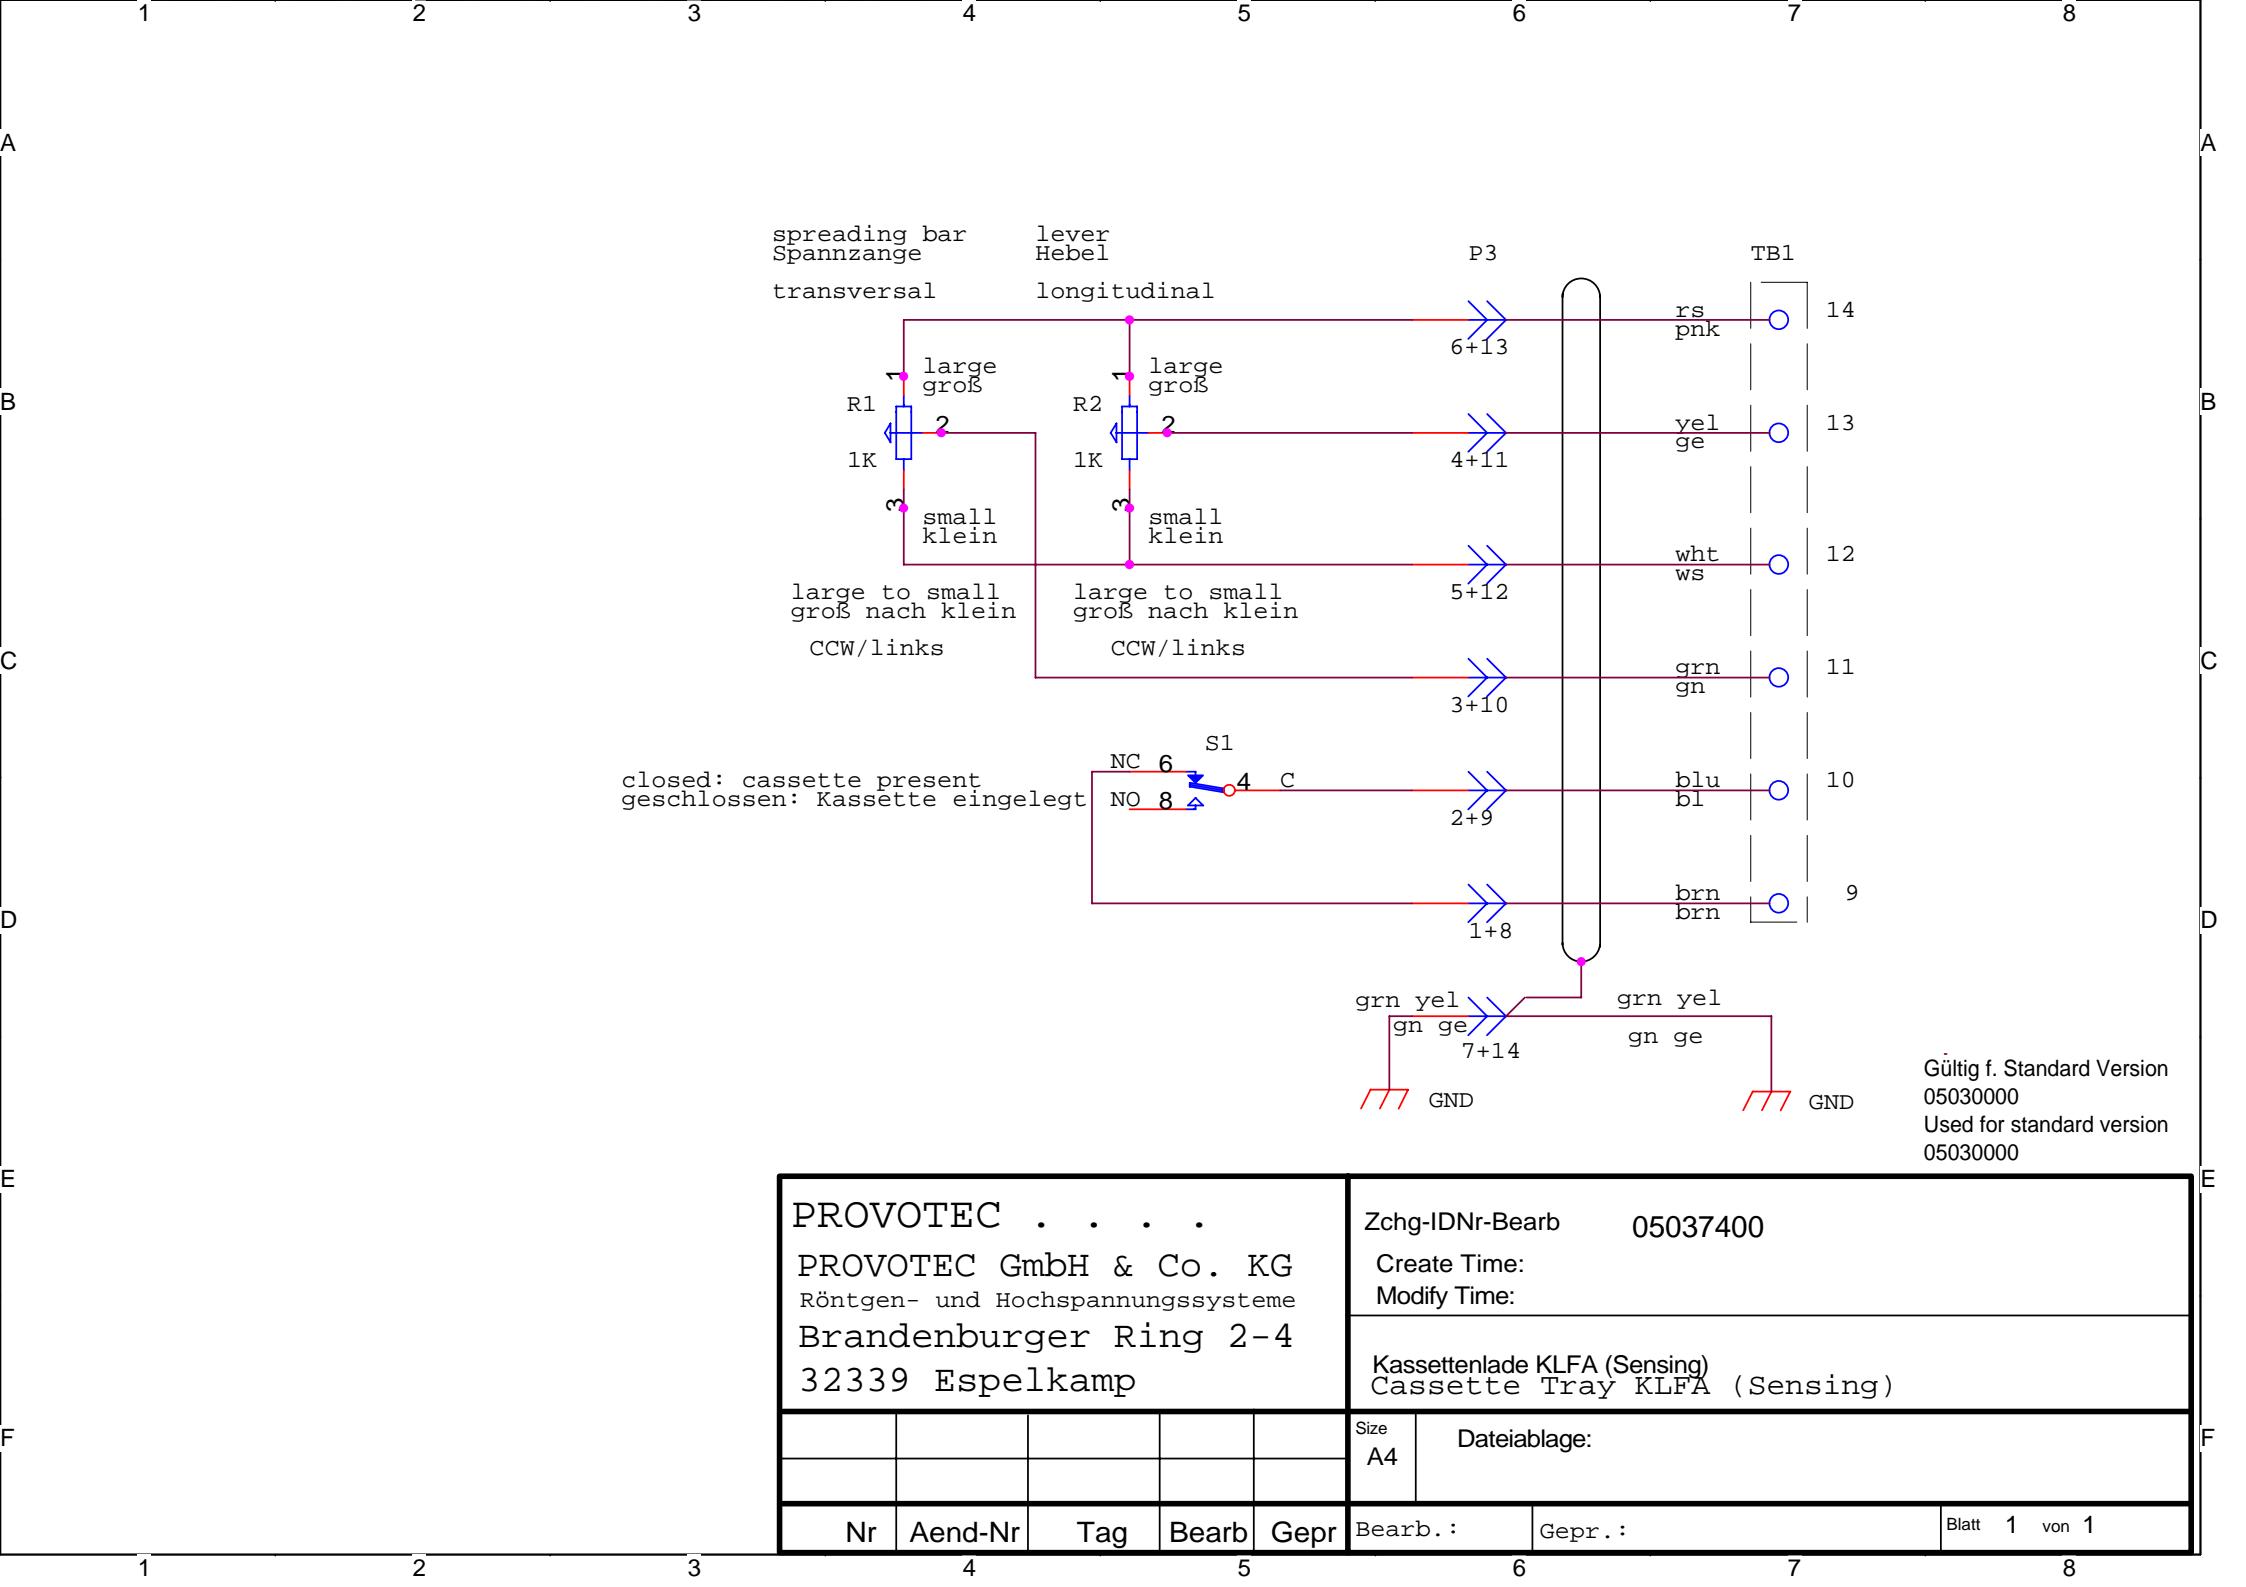

### 6.1.5 Bucky with Fail-Safe

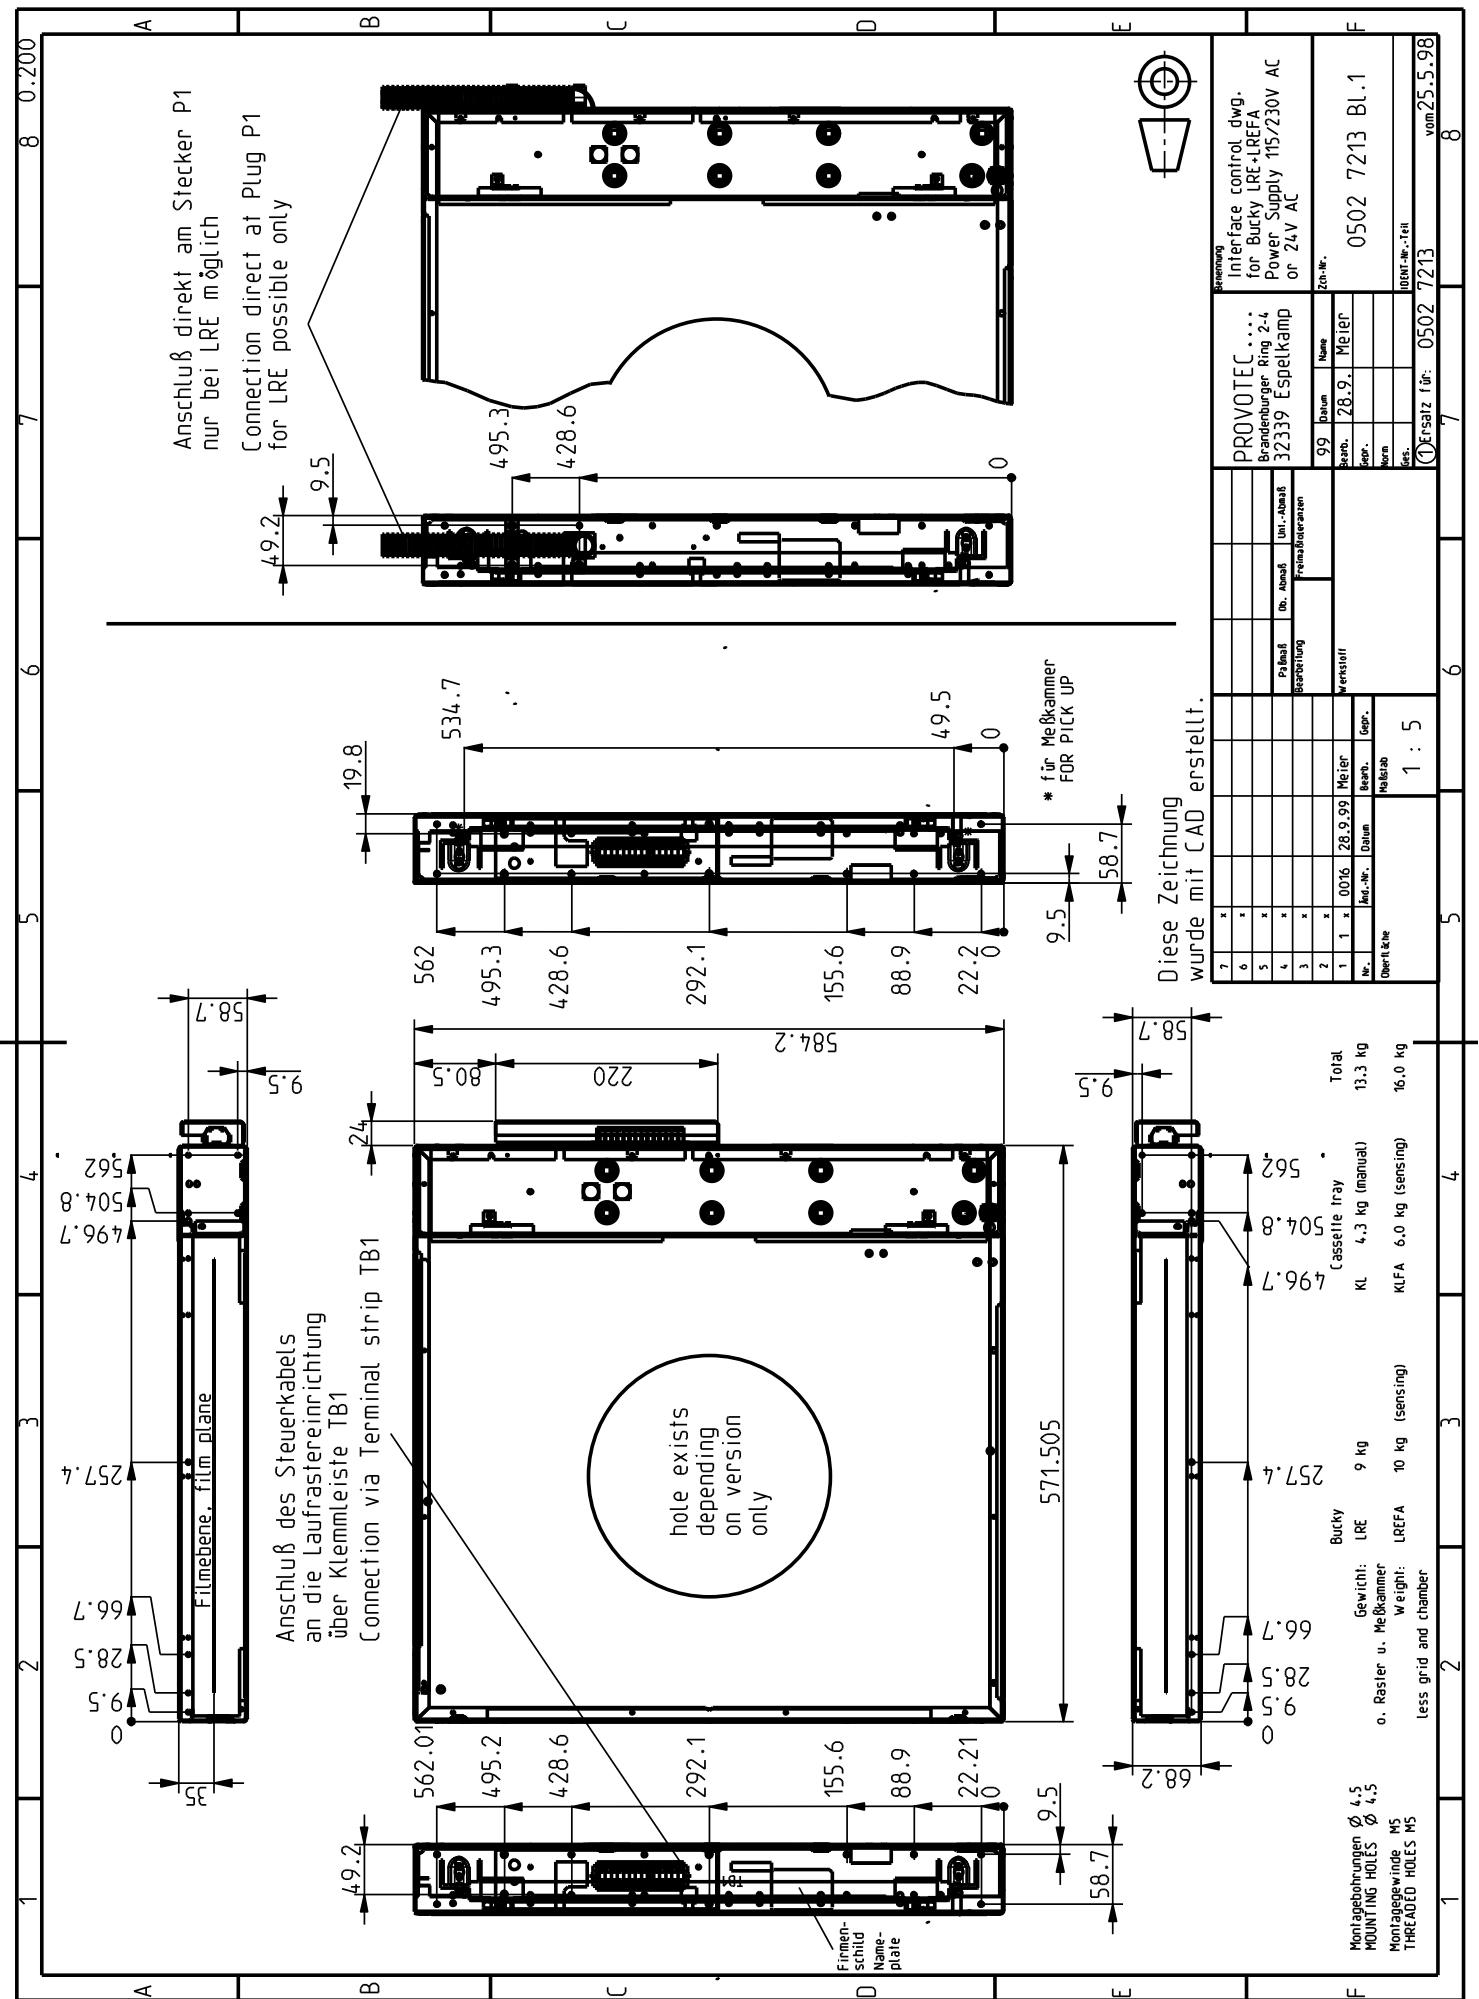

See Chapter 2.3

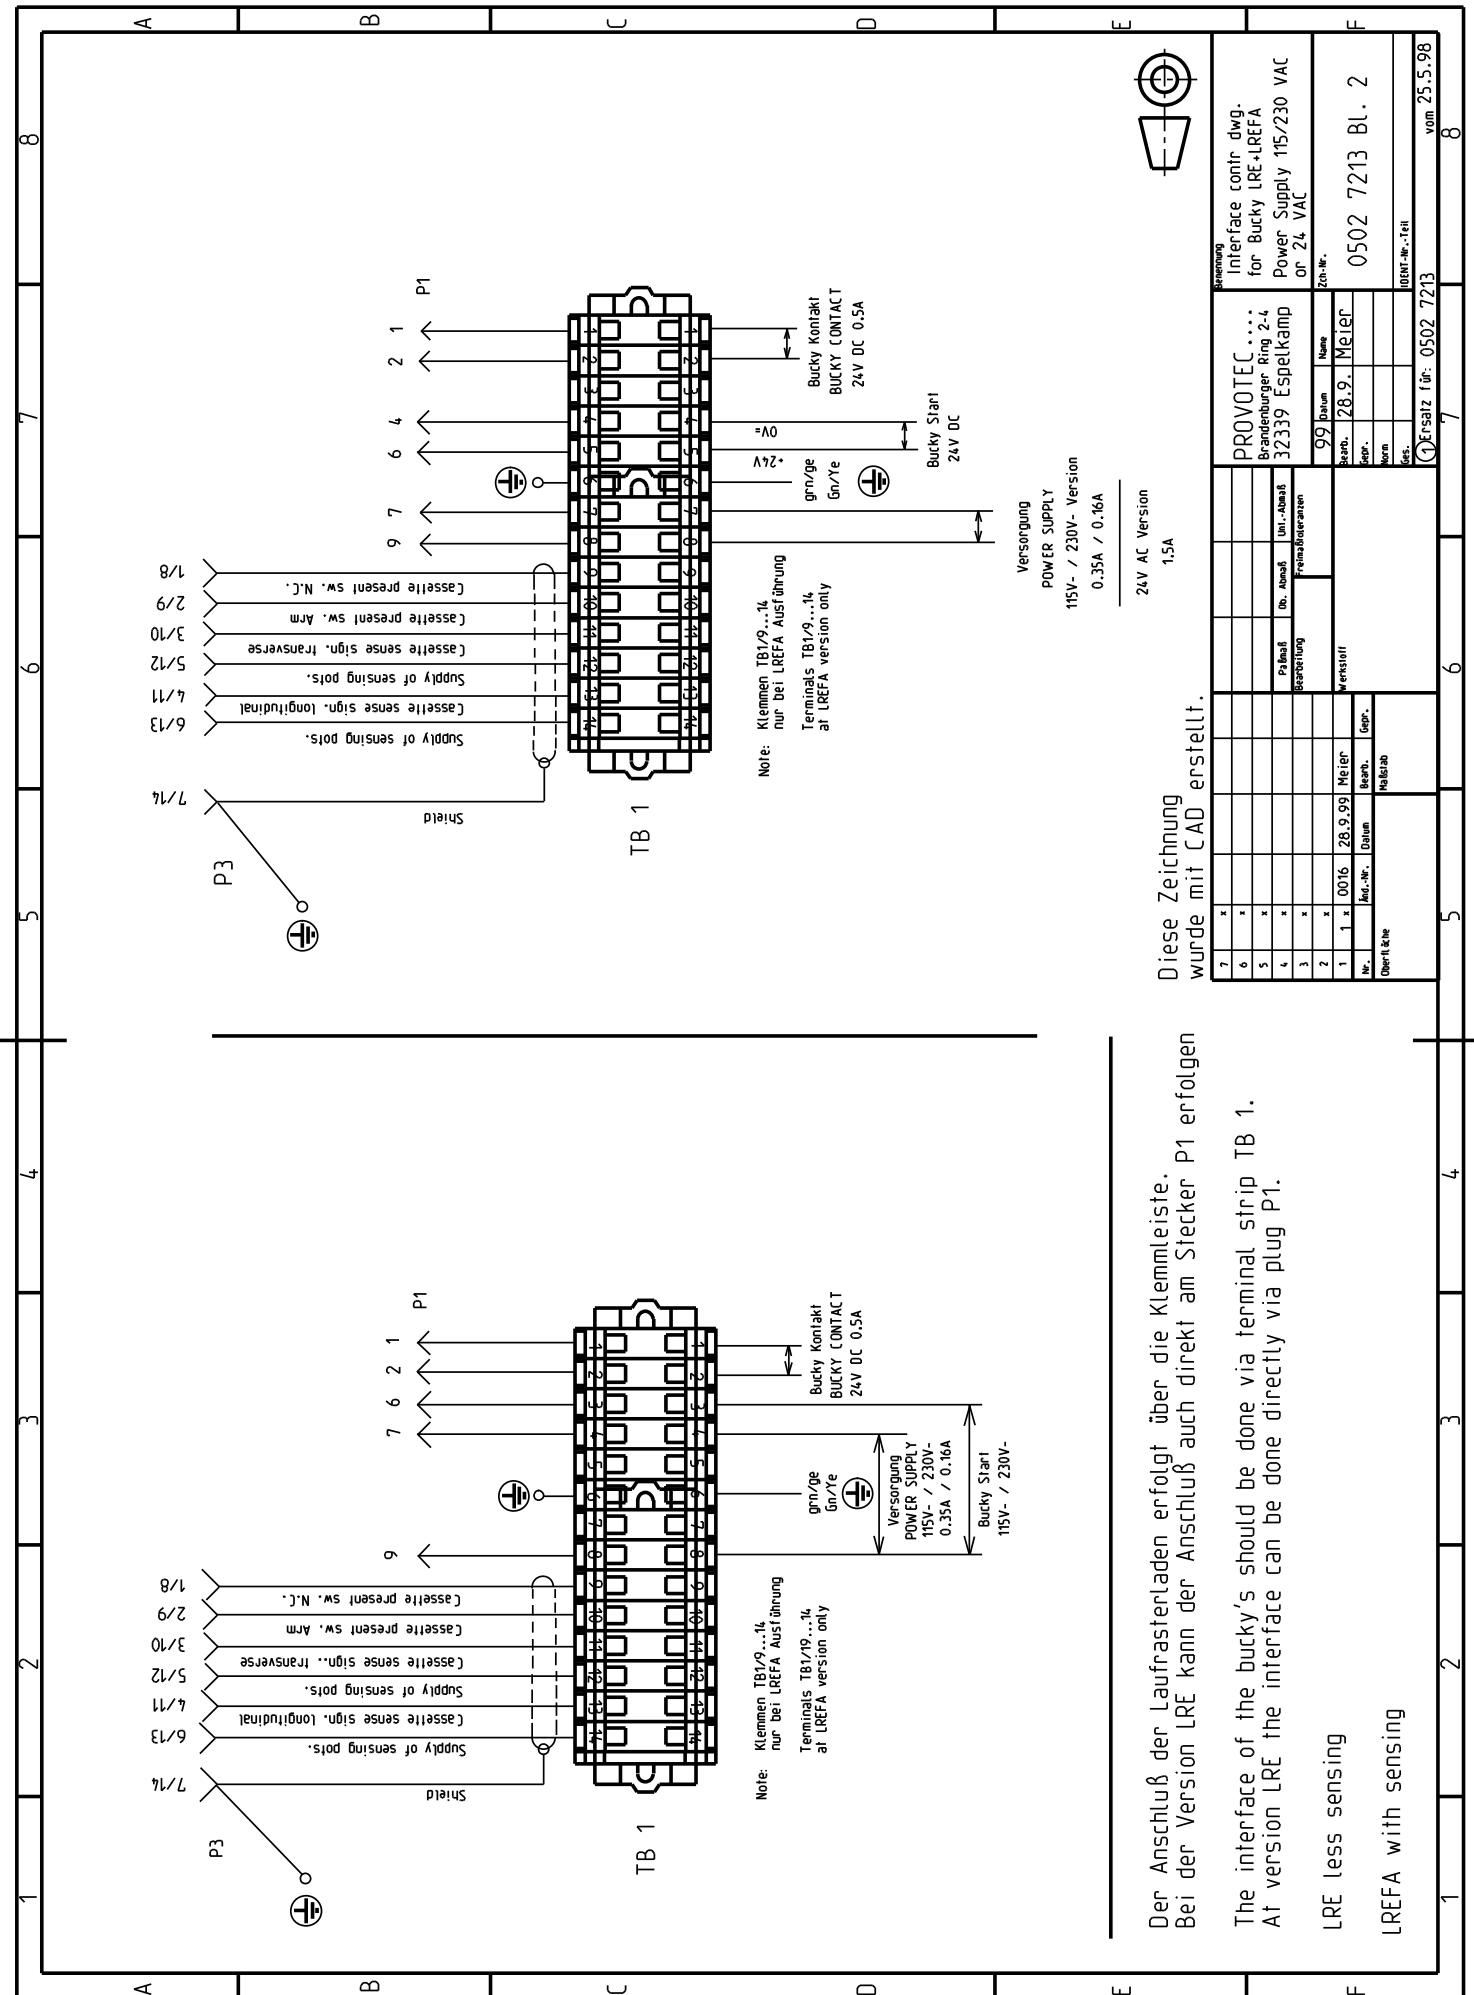

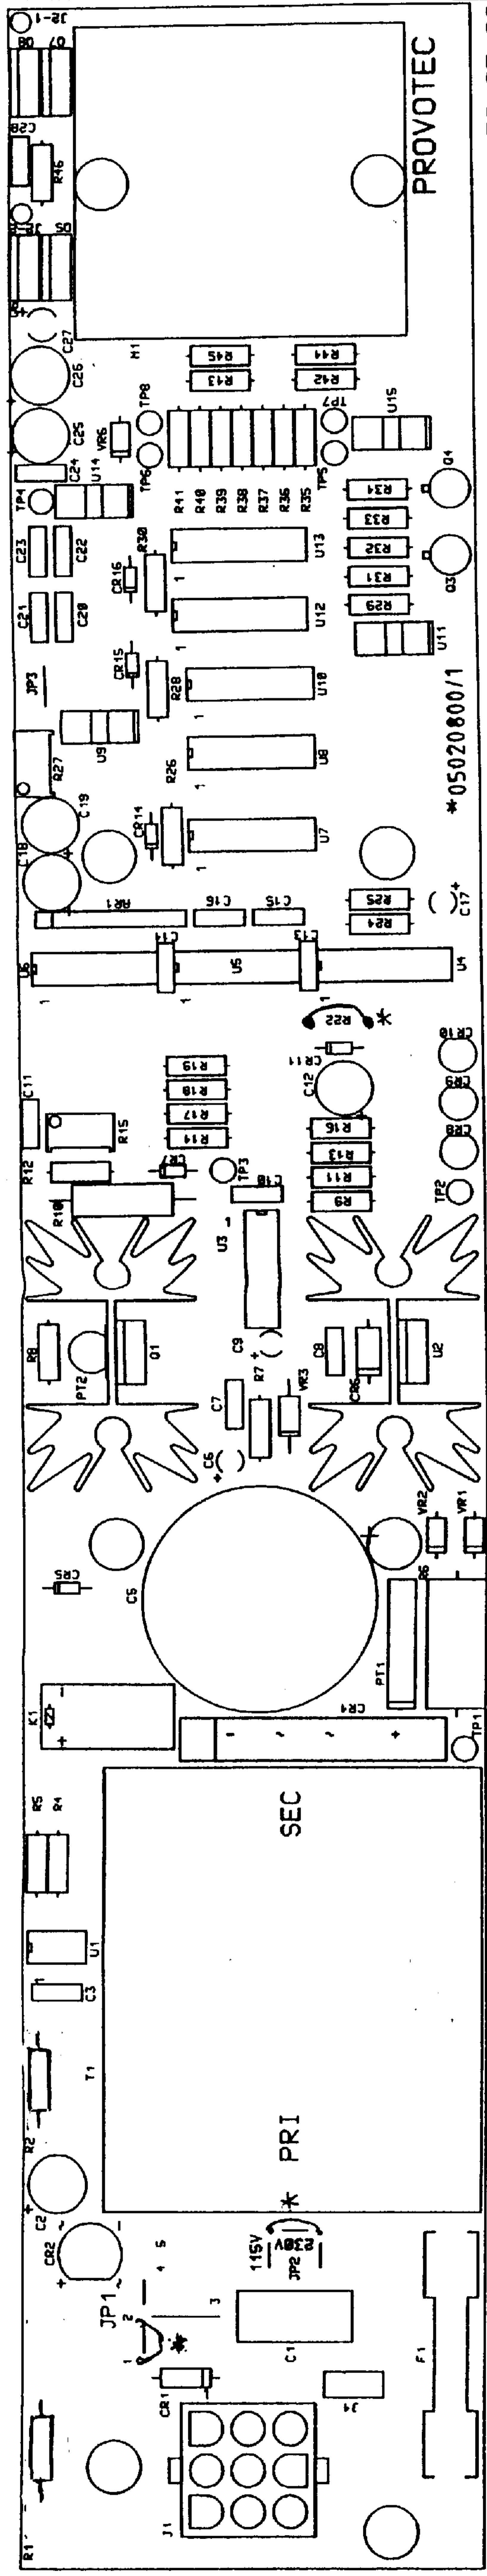

\* IDENT-Nr. mit Schrägstrich u. Rev.-Index ergänzt u. als Aufkleber oder handschriftlich an gekennzeichneter Stelle auf der Leiterplatte angebracht.  
Der Rev.-Index beginnt mit 1 und ist aus der linken Spalte des Schriftfeldes zu entnehmen.

\* Jumper, Brücke

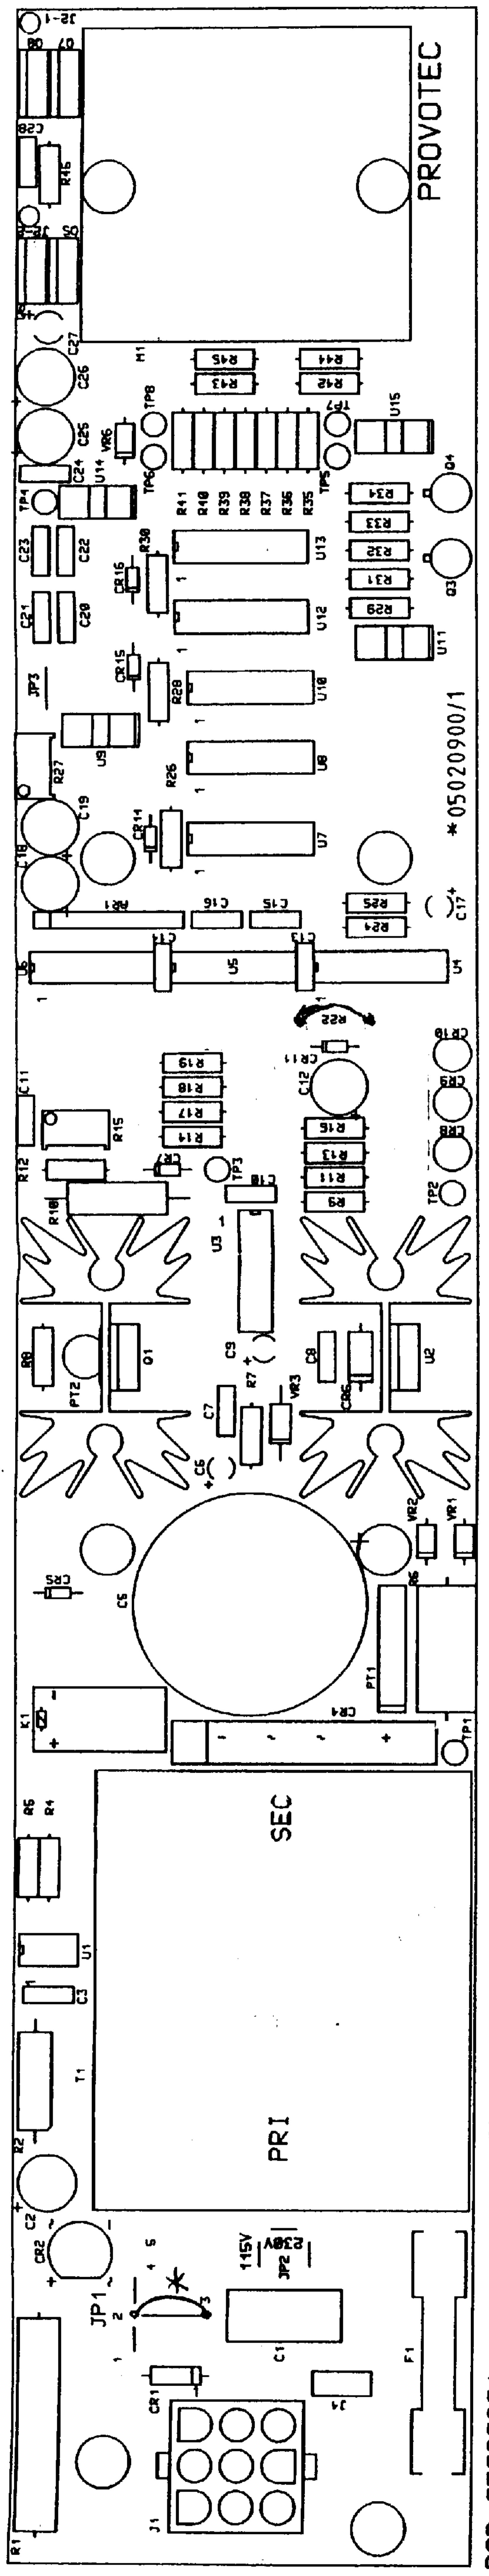

**Notes:**

1. Use conductive paste for Q1, U2 and PT2 between parts and the heat sinks.  
Für die Montage von Q1, U2 und PT2 zum Kühlkörper ist Wärmeleitpaste zu benutzen.
2. Assemble resistors R6 and R10 that a distance of min. 6 mm is between the parts and the PCB.  
Die Widerstände R6 und R10 müssen mit einem Abstand von min. 6 mm zur Leiterplatte montiert werden.

# **Bucky LRE,LRE-FSE and LREFA**

**Model/ID: 0502 0000 – 0010**  
**Model/ID: 0502 0015 – 0021**

## **Spare parts list**

Ident. Nr. 0502 7601 P

**PROVOTEC GmbH & Co. KG**  
**Röntgen- und Hochspannungssysteme**  
Brandenburger Ring 2 - 4  
32339 Espelkamp  
Germany  
Phone: (+49) 57 72 / 97 89 00  
Fax: (+49) 57 72 / 97 89 10  
e-mail: [info@provotec.de](mailto:info@provotec.de)

## **GENERAL:**

This parts list was written with the intent of providing the user a complete listing of all electrical and main mechanical parts used in the assembly of this unit, with the exception of hardware items such as nuts, screws, bolts and washers.

## **ORDERING:**

When ordering parts the following details are necessary:

### **ORDERING EXAMPLE:**

DEVICE TYPE:	BUCKY LRE / LREFA
PARTS LIST NO.:	0502 7601 P
FIG. and ITEM NO.:	1-10
PART NO.:	3900 0251
DESIGNATION:	FASTENING UNIT
QUANTITY:	6
EDITED:	October 1999

If a part cannot be found in the Parts List, include the Catalogue No. of the unit, the serial No. and detailed descriptions or photos and part in question.

If there were wanted common nuts, screws and washers, please note and order.

The marked identifications of parts are only available in special kits.

## **Allgemeines:**

Diese Ersatzteilliste enthält alle elektrischen und die wichtigsten mechanischen Teile. Nicht aufgeführt sind Muttern, Schrauben, Unterlegscheiben und ähnliche Teile.

## **Bestellung:**

Bei Bestellung von Teilen sind folgende Angaben erforderlich:

### **Bestellbeispiel:**

Geräte-Typ:	Laufastereinrichtung LRE / LREFA
Ersatzteillisten-Nr.:	0502 7601 P
Figur- und Teil-Nr.:	1-10
Ersatzteil-Nr.:	3900 0251
Bezeichnung:	Befestigungselement
Menge:	6
Herausgabedatum:	Oktober 1999

Falls ein Teil nicht in der Ersatzteilliste gefunden werden kann, sind Kat.-Nr. und Serien-Nr. des Gerätes sowie eine genaue Beschreibung oder ein Foto des infrage kommenden Teiles beizufügen; sollten evtl. DIN-Teile zu bestimmten Baugruppen gewünscht werden, ist dies bei der Bestellung zu vermerken.

Die Bestellangaben mit Index sind nur in Verbindung mit den angegebenen Baugruppen erhältlich.
