

Service connector for B.Braun Infusomat / Perfusor

For activating the service program, showing the software version, changing the contrast of the display and other service settings a special service connector is needed. The connector is plugged in the MFC socket at the rear of the unit.

The plug contains jumpers which are connected as followed:

- For 5-pin plug: connection between 2 + 4
- For 12-pin plug: connection between 6 + 8 + 10

If such a plug is not available the pins can be connected temporarily directly at the socket.

More information in the respective service manual.

Many thanks to Karsten (Germany)!
